

Greenhouse Gas Reporting Program

XML Reporting Instructions for Subpart C - General Stationary Fuel Combustion Sources

United States Environmental Protection Agency
Climate Change Division
Washington, DC

August 22, 2011

These instructions explain how to report the required data for the applicable regulations. Owners and operators of units should refer to the applicable regulations for information about what data are required to be reported.

EPA has finalized a rule that defers the deadline for reporting data elements used as inputs to emission equations for direct emitters. (See <http://www.epa.gov/climatechange/emissions/notices.html> for a pre-publication version of the rule). In accordance with the rule, e-GGRT is not currently collecting data used as inputs to emission equations.

Introduction

The U.S. Environmental Protection Agency's (EPA's) electronic greenhouse gas reporting tool (e-GGRT) extensible markup language (XML) Reporting Schema, contains all of the data elements needed to comply with the greenhouse gas reporting program (GHGRP) beginning with the 2010 data collection year. The schema defines expected data elements and attributes, allowable data types for each element, and the hierarchy and order in which elements must appear. Similar to an architectural blueprint that describes the structural design of a house, an XML schema describes the structural design of an XML file. In some cases, it also defines which elements are optional and which are required, and the maximum number of occurrences allowed for each element.

The e-GGRT XML schema is made up of a root element, complex elements, and simple elements. A simple element is a single piece of data. A complex element is a group of simple elements which are logically grouped together. The root element is the base of the XML schema.

The elements are related to each other in parent-child relationships. The root element is the parent element of the entire schema. Complex elements are children of the root element, and complex elements can also be children of other complex elements. If a complex element is dependent on a parent complex element, the child complex element cannot be included in the XML file unless the appropriate parent complex element is also included.

The XML upload method may be used only for submitting the annual GHG report. User and facility or supplier registration, and the Certificate of Representation, must be entered on-line using e-GGRT.

All XML files submitted to e-GGRT must be well formed and will be accepted only if they conform to the correct and current version of the e-GGRT XML schema.

An XML submission can only contain GHG data for a single facility or supplier. All data for a facility or supplier must be submitted in a single file as a complete report and must include all of the relevant subparts. It is not possible to submit a subset of any portion of a facility's data to add, delete, correct, or update. The entire report must be resubmitted to make any modification at all. Each subsequent submission for the same facility replaces all of the previously submitted data.

The e-GGRT XML schema contains enumerated lists of the units of measures for some data elements and allowable values for some data elements. For rules regarding the unit of measure or allowable values for a specific data element, please refer to the appropriate Data Elements table.

The e-GGRT XML Reporting Schema v1.2 is available for download at the GHGRP web site here: http://www.epa.gov/climatechange/emissions/e-ggrt_xml.html. The v1.2 zip file contains:

- **GHG_Final_v1.2.xsd and Included Files**
- **SchemaChanges.xlsx**

This topic provides a step-by-step description of how to report data for a Subpart C Stationary Fuel Combustion Sources configuration and overall total Subpart C emissions for a facility using the XML schema. Please note the following:

- **Not all data elements included in the schema must be reported.** Required or relevant data components and data elements are boxed in red in the schema diagrams and listed in the tables. If a data element is not listed, it does not need to be reported (e.g., deferred data elements, IsConfidentialBusinessInformationIndicator). Some data elements are conditional and only need to be reported if they are relevant to the reporting facility.

- Enumerations are case sensitive.** Values must be entered exactly as they are displayed in order to be accepted by schema validation.
- Data elements must be reported in a specific order.** The figures and tables in this document depict the specific order in which data elements must be reported in order to produce a well-formed XML report.
- Not all data elements for calculated and measured values are displayed in the schema diagrams.** The parent elements for calculated and measured values are displayed in the schema diagrams in this document, but not all of the specific data elements to be reported are displayed. The descriptions in the XML data elements tables include the specific data elements to report, which are commonly the calculated or measured value and the unit of measure. For some values, the number of times substitute data procedures were used may also be required. See Figure 1 for the expanded view of a sample data element which is a calculated value and Figure 2 for the expanded view of a sample data element which is a measured value.

Figure 1
Sample Calculated Value Schema Diagram

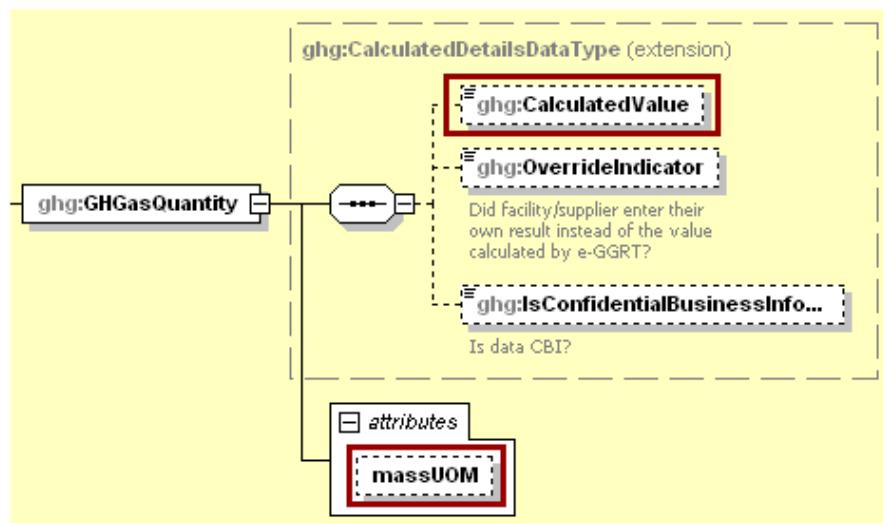

Figure 2
Sample Measured Value Schema Diagram

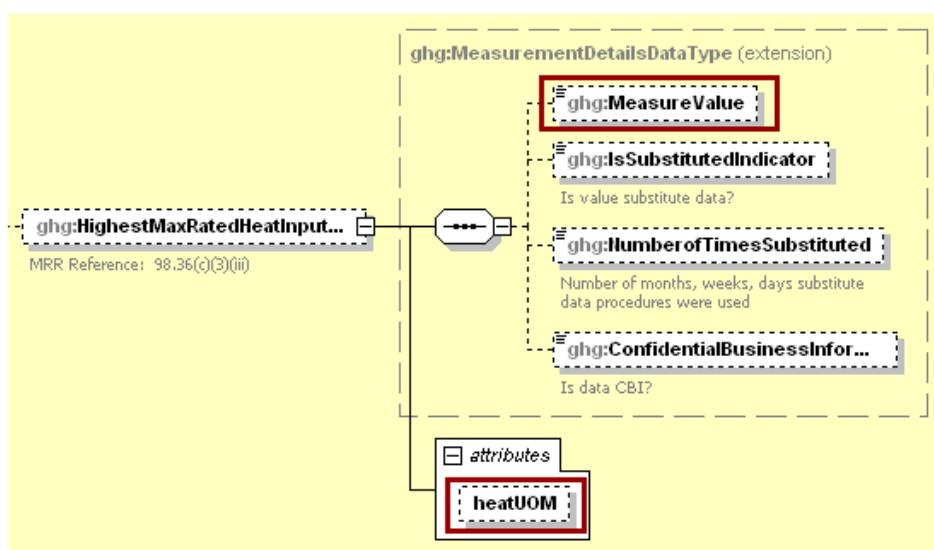

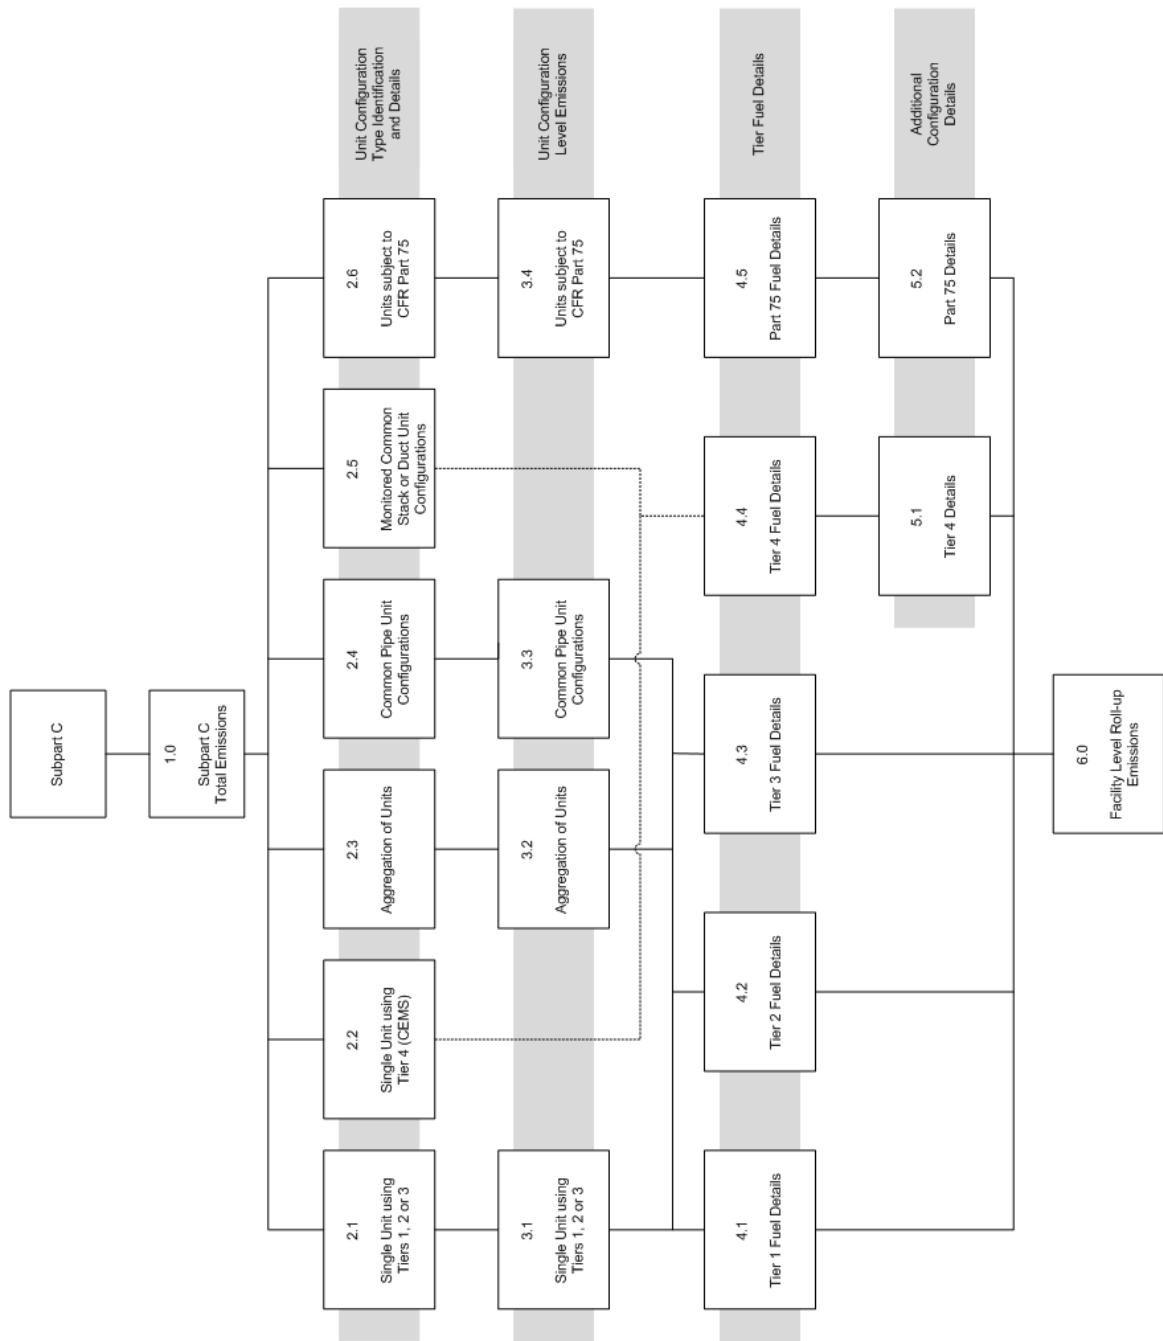

Figure 3
Subpart C Reporting Diagram

The XML schema includes the following areas for reporting for Subpart C, as diagrammed in Figure 3 above:

- 1.0 Subpart C Total Emissions: includes the total greenhouse gas emissions required to be reported for Subpart C.
- 2.0 Configuration Identification Information: includes unit configuration type identification and details.

- 3.0 Unit Configuration Level Emissions: includes information on how to report emissions based on configuration type.
- 4.0 Tier Fuel Details: includes how to report fuel information based on the tier methodology used.
- 5.0 Additional Configuration Details: includes additional information to report for Tier 4 and Part 74 methodologies.
- 6.0 Facility Level Roll-up Emissions: includes information on how to report total emissions for CO₂e (excluding biogenic CO₂) and biogenic CO₂ from Subpart C at the facility level.

The following terminology is used throughout this document:

- Namespace: A namespace uniquely identifies a set of names such that there is no ambiguity when objects having different origins but the same names are mixed together.
- Markup Language: A way to combine text and extra information to show the structure and layout of a document. This information is expressed using markup, which is typically intermingled with the primary text. A commonly known markup language is HTML.
- XML: A markup language for documents containing structured information. The XML specification defines a standard way to add markup to documents. Its primary purpose is to facilitate the sharing of structured data across different information systems, particularly via the internet.
- XML Schema: An XML schema describes the structure of an XML document. An XML schema defines the set of rules to which the XML document must conform in order to be considered "valid" according to its schema. An instance of an XML schema is an XML schema document and is a file with the extension .xsd.
- XML Document: An XML document is a file containing data organized into a structured document using XML markup. An XML document is considered to be "well-formed" if it conforms to all XML syntax rules. An XML document is considered to be "valid" if it conforms to all the semantic rules defined by an associated XML schema. An XML document cannot be processed if it is not well-formed or valid. XML documents have the file extension .xml.
- XML Element: An XML element is a unit of the XML document that is expressed as tags in the form "<tagname>." XML elements must have either a start and end tag as in <ghg:GHGasInfoDetails></ghg:GHGasInfoDetails> or a single empty tag name as in <ghg:GHGasInfoDetails/>. XML elements may be nested within one another in a structured hierarchy and sequence specified in an XML schema.
- XML Attribute: An XML attribute contains additional information about an XML element placed at the start tag of the XML element. XML attributes have the form attributeName = "attributeValue," as in <ghg:GHGasQuantity massUOM="Metric Tons">. XML attributes are used to report identifying information or to help e-GGRT process the data being reported within the data elements.

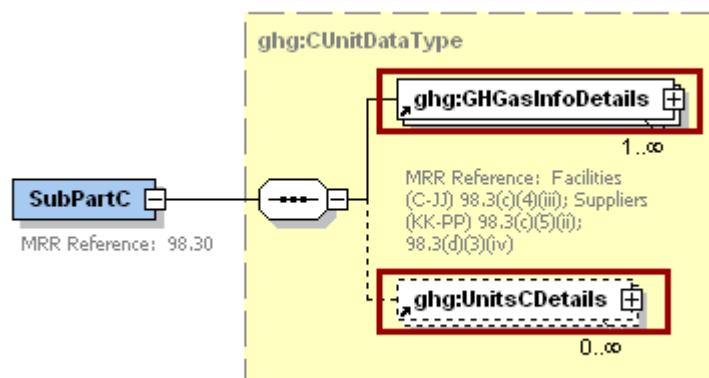

Rounded results from calculated values should be reported in the XML schema. Please use the following rounding rules:

- 1) CO₂e and CO₂ emissions data expressed in metric tons should be rounded to one decimal place. This should be done regardless of the level of data collection (e.g., unit-level, facility-level). Quantities less than 0.05 metric tons would round to 0.0 and be reported as such. Quantities greater than or equal to 0.05 metric tons would round up to 0.1 and be reported as such. This rule applies when greenhouse gases other than CO₂ are reported in metric tons CO₂e.
- 2) CH₄ emissions data expressed in metric tons should be rounded to two decimal places.
- 3) N₂O emissions data expressed in metric tons should be rounded to three decimal places.
- 4) Emissions data for all GHGs other than CO₂, N₂O, and CH₄ expressed in metric tons should be rounded to the fourth digit to the right of the decimal (one tenth of a kilogram, or 1 ten

thousandth of a metric ton). This rounding should be applied regardless of the level of data collection (unit, facility, etc.).

- 5) Other (non-emissions) quantitative data reported by the user (e.g., a monthly HHV sample result, an annual production quantity) will not need to be rounded.
- 6) In the case of aggregation/roll-ups, those calculations should be performed on the rounded values.

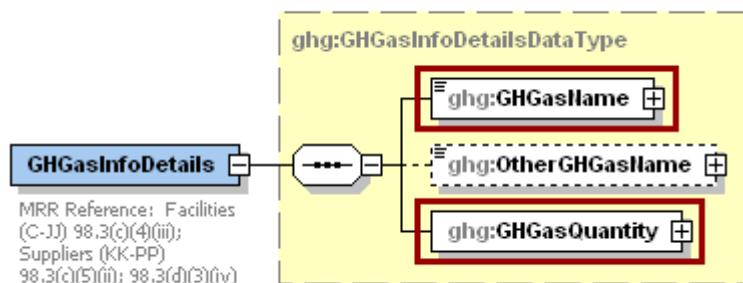

Figure 4
Subpart C Schema Diagram

1.0 Subpart C Total Emissions

Greenhouse gas information details comprise a collection of data elements to report the total annual emissions of each greenhouse gas (GHG) listed in Table A-1 of the Mandatory Reporting of GHG, part 98 reported under Subpart C, expressed in metric tons.

Figure 5
Greenhouse Gas Information Details Schema Diagram

For Subpart C, report total emissions for biogenic carbon dioxide (CO₂), CO₂ (excluding biogenic CO₂), methane (CH₄) and nitrous oxide (N₂O). For greenhouse gas quantity, report the calculated value and mass unit of measure (Metric Tons) only according to the following guidelines:

1) Total CO₂ emissions (excluding biogenic CO₂):

- For Configuration Types 1 and 3, add the CO₂ emissions (include both biogenic and non-biogenic CO₂) for each fuel and for each configuration in metric tons rounded to one decimal place, add the CO₂ emissions from sorbent use for each configuration in metric tons rounded to one decimal place, and subtract the total biogenic CO₂ emissions for each configuration in metric tons rounded to one decimal place.
- For Configuration Types 2, 5 and 6, add the CO₂ emissions (include both biogenic and non-biogenic CO₂) measured by the CEMS or applicable Part 75 methodology for each configuration in metric tons rounded to one decimal place and subtract the total biogenic CO₂ emissions for each configuration.
- For Configuration Type 4, add the CO₂ emission (include both biogenic and non-biogenic CO₂) for each fuel and for each configuration in metric tons rounded to one decimal place and subtract the total biogenic CO₂ emissions for each configuration in metric tons rounded to one decimal place.

2) Total biogenic CO₂ emissions:

- Add the total annual biogenic CO₂ emissions for each configuration in metric tons rounded to one decimal place. This includes CO₂ emissions from biomass fuels, and the biogenic portion of CO₂ emissions from mixed biomass and fossil fuels (i.e. MSW and tires).

3) Total CH₄ emissions:

- For Configuration Types 1 through 5, add the values reported for CH₄ emissions for each fuel and for each configuration in metric tons rounded to two decimal places.
- For Configuration Type 6, divide the values reported for CH₄ emissions in CO₂e by the Global Warming Potential for CH₄ (21) and add the result rounded to two decimal places.

4) Total N₂O emissions:

- For Configuration Types 1 through 5, add the values reported for N₂O emissions for each fuel and for each configuration in metric tons rounded to three decimal places.
- For Configuration Type 6, divide the values reported for N₂O emissions in CO₂e by the Global Warming Potential for N₂O (310) and add the result rounded to three decimal places.

Table 1
Greenhouse Gas Information Details XML Data Elements

Data Element Name	Description
GHGasInfoDetails	A collection of data elements containing the total annual emissions of each greenhouse gas (GHG) listed in Table A-1 of the Mandatory Reporting of GHGs, part 98 reported under this subpart, expressed in metric tons.
GHGasName	Specify the name of the GHG. See list of allowable values: Carbon Dioxide Biogenic Carbon dioxide Methane Nitrous Oxide
GHGasQuantity	A collection of data elements that quantify the annual emissions from this source category. Report the calculated value only using the guidelines above.
GHGasQuantity.massUOM	Metric Tons

```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

2.0 Configuration Identification Information

For stationary combustion sources required to report under Subpart C, e-GGRT requires you to identify which reporting option each unit or group of units will be using to report emissions. The different Subpart C reporting options are referred to as Configurations in e-GGRT. The individual configurations are designed to match the reporting options made available by the rule in 40 CFR 98.36. As specified in part 98, each configuration has slightly different reporting requirements. Emissions information to be reported is either aggregated at the configuration level or is to be reported for a specific fuel combusted in the configuration. A facility may have multiple configuration types and/or multiple configurations of any given type.

The unit or group configuration types are as follows:

- Configuration Type 1 - A single unit using Tiers 1, 2 or 3 to calculate emissions [98.36(b)]
- Configuration Type 2 - A single unit using Tier 4 (CEMS) to calculate emissions [98.36(b)]
- Configuration Type 3 - A group of units using the aggregation of units reporting alternative [98.36(c)(1)]
- Configuration Type 4 - A group of units using the common pipe configurations reporting alternative [98.36(c)(3)]
- Configuration Type 5 - A group of units using Tier 4 (CEMS) to calculate emissions and reporting under the monitored common stack or duct configurations reporting alternative [98.36(c)(2)]
- Configuration Type 6 – Part 75 units using the alternative CO₂ mass emissions calculation methods provided in 98.33(a)(5) [98.36(d)(2)]

The configuration types are described in further detail below. For more information on the different reporting options, please refer to the applicable paragraphs in 40 CFR 98.36.

Configuration Type 1 - Single Unit Using Tiers 1, 2 or 3 [98.36(b)]

The single unit reporting configuration is the most basic configuration type. Any unit may be reported individually in e-GGRT. If the unit uses Tiers 1, 2 or 3 to calculate CO₂ emissions, it must be reported as a configuration of Type 1. If the use of Tier 4 is required or elected, Configuration Type 2 or 5 must be used.

A unit under Configuration Type 1 may combust multiple fuels, and it is possible for the different fuels to be reported using different tiers. For example, a unit that is 500 mmBtu/hr in size may be required to use Tier 3 for coal, but only Tier 2 for natural gas or fuel oil.

Facilities with numerous units should investigate if Configuration Type 3 (aggregation of units) or Type 4 (common pipe) may be used.

Configuration Type 2 – Single Unit Using Tier 4 [98.36(b)]

Configuration Type 2 is the reporting option for single units that are either required or elect to use Tier 4 (CEMS). CO₂ emissions will be reported for all fuels combined, but CH₄ and N₂O emissions will still need to be reported on a fuel by fuel basis.

Should a unit change methodology from Tiers 1-3 to Tier 4 during the year, the unit will need to be added as two separate configurations in e-GGRT with different configuration names.

If a single CEMS is used to monitor multiple units (multiple combustion, or one combustion and one or more process units), Configuration Type 5 should be used instead.

Configuration Type 3 – Aggregation of Units [98.36(c)(1)]

The *aggregation of units* option is a reporting configuration that allows multiple units to be reported as a single entity provided that certain conditions are met. If this reporting option is selected, emissions from all units grouped in this configuration will be reported as combined emissions in e-GGRT.

If a facility contains two or more units, each of which has a maximum rated heat input capacity of 250 mmBtu/hr or less, you may report these units as a single reporting configuration of Type 3 in e-GGRT, provided that only Tiers 1-3 are used and the units use the same tier for any common fuels combusted. Fuels of different types may use different tiers, as permitted. There is no limit on the number of units that may be included in this configuration provided the previous criteria are met.

While the use of Tier 3 is permitted to be used in an *aggregation of units* configuration, it is generally not required for configurations of this type as Tier 3 is only required for certain units larger than 250 mmBtu/hr. Units of that size may not be included in the *aggregation of units* configuration.

Configuration Type 4 – Common Pipe [98.36(c)(3)]

The *common pipe* reporting configuration is another alternative reporting option that allows for multiple units to be reported as a single group entry.

This configuration is different from the *aggregation of units* configuration in that there is no size constraint. The *common pipe* configuration may only be used if two or more stationary combustion units at a facility combust the same type of liquid or gaseous fuel and the fuel is fed to the individual units through a common supply line or pipe.

The *common pipe* configuration may only be used if the units only combust the liquid or gaseous fuel supplied by the common pipe. Units that combust fuel other than the fuel supplied by the common pipe must be accounted for under a separate configuration. For example, a unit that burns coal and natural gas may not be included in a *common pipe* configuration for units that only combust natural gas. In such a situation, you may report the units that only combust natural gas as a common pipe configuration. To calculate emissions for the common pipe, you would subtract the quantity of diverted gas (i.e. gas combusted at a coal unit) from the quantity of gas measured for the common pipe by using company records. The diverted gas would need to be accounted for in a separate configuration (unless diverted offsite or to an exempt unit).

The tier required for the common pipe configuration is based on the maximum rated heat input capacity of the largest unit served by the common pipe.

Configuration Type 5 – Common Stack [98.36(c)(2)]

If multiple units vent to a common stack or duct and Tier 4 is used to calculate the CO₂ emissions for those units, the *common stack* configuration must be used. If only a single combustion unit vents to the stack and no process units are vented to the stack, then Configuration Type 2 (single unit using Tier 4) must be used.

Configuration Type 6 – Alternative Part 75 Reporters [98.36(d)(2)]

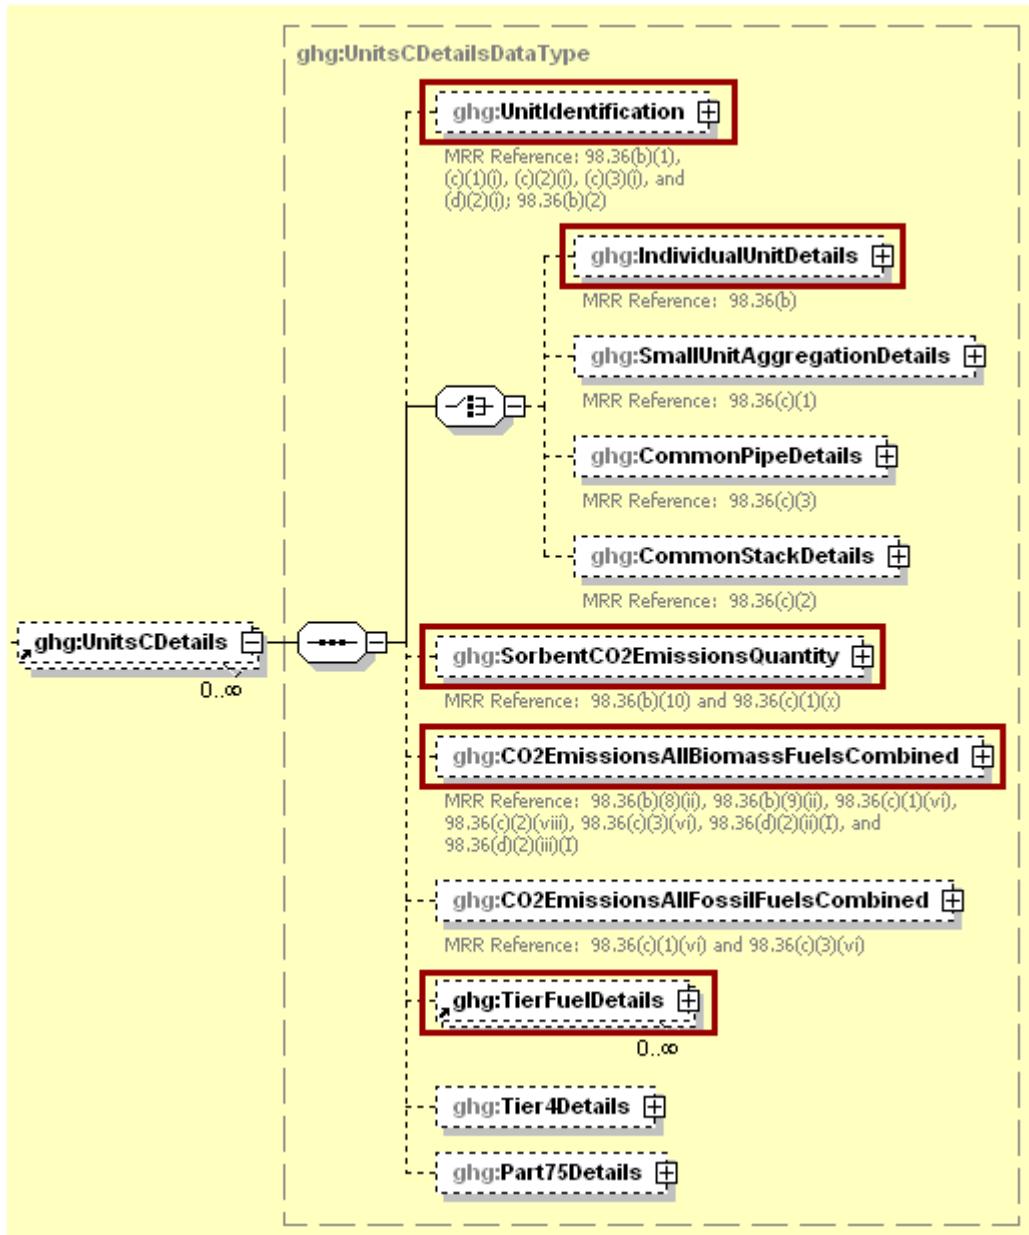

This configuration represents the alternative calculation and reporting requirements available to certain units that report heat input year-round to EPA according to part 75. Units subject to subpart D (electricity generating units that are subject to the Acid Rain Program or EGUs that are otherwise required to monitor and report to EPA CO₂ emissions year-round according to Part 75) would not be eligible to report under this option. Units subject to subpart D should report following the instructions for subpart D.

If this option is selected in place of using one of the four tiers, the applicable calculation methodology specified in 98.33(a)(5) must be used to calculate CO₂ emissions and the reporting requirements specified in 98.36(d)(2) replace the requirements specified in 98.36(a)-(b).

2.1 Configuration Type 1 Identification

Specific data components are required for Configuration Type 1. See the relevant components boxed in red in the figure below.

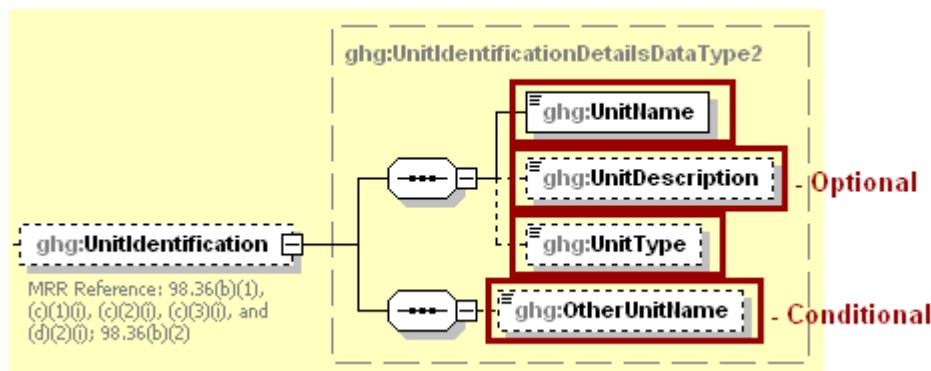

Figure 7
Units C Details for Configuration Type 1 Schema Diagram

Each single unit using Tiers 1, 2 or 3 to calculate emissions must be identified separately so that emissions information can be reported for a specific unit.

If a single units switches from using Tiers 1-3 to Tier 4 during the year, a new configuration of Configuration Type 2 must be added to represent the period in which Tier 4 was used. Different unit names would need to be used for the two configurations even though the configurations are representing the same unit.

Figure 8
Configuration Type 1 Unit Identification Schema Diagram

For configurations of **Type 1 (single unit using Tiers 1, 2, or 3)**, Subpart C requires the following identification information for each configuration:

- A unique unit name or identifier (e.g., a unit ID number) [98.36(b)(1)]
- An optional unit description or label [optional]
- A code representing the type of unit [98.36(b)(2)]

Table 2
Configuration Type 1 Unit Identification XML Data Elements

Data Element Name	Description
UnitsCDetails	A collection of data elements containing details regarding each stationary fuel combustion unit configuration.
UnitIdentification	A collection of data elements containing the identity of each Subpart C reporting configuration.
UnitName	A user-defined identifier for this unit. Each unit or configuration must have a unique UnitName.
UnitDescription	An optional description or label.
UnitType	<p>A code representing the type of unit. See the list of allowable unit type codes below. If the unit type is not provided in the list, report “OCS (Other combustion source)” and report the unit type using the OtherUnitName element.</p> <p>PCWD (Pulverized coal, wall-fired, dry bottom) PCWW (Pulverized coal, wall-fired, wet bottom) PCT (Pulverized coal, tangentially-fired) PCO (Pulverized coal, other) CF (Cyclone Furnace) S (Stoker Boiler) BFB (Boiler, bubbling fluidized bed) CFB (Boiler, circulating fluidized bed) PFB (Boiler, pressurized fluidized bed) OFB (Fluidized bed, other) OB (Boiler, other) FLR (Flare)</p>

Data Element Name	Description
	II (Incinerator, institutional) ICI (Incinerator, commercial and industrial) IGCC (Integrated gasification combined cycle) RICE (Reciprocating internal combustion engine) MWC (Municipal waste combustor) PRH (Process Heater) TODF (Thermal oxidizer, direct fired, no heat recovery) RTO (Regenerative thermal oxidizer) RCO (Regenerative catalytic oxidizer) CCCT (CC (Turbine, combined cycle)) SCCT (CT (Turbine, simple cycle combustion)) CH (Comfort heater) PD (Product or intermediate product dryer) K (Kiln) F (Furnace) C (Calciner) O (Oven) HWH (Heater, hot water) IFCE (Direct fired industrial food cooking equipment) NGLH (Heater, natural gas line) Cath (Heater, catalytic) HMH (Heater, heat medium for heat exchange) COB (By-product recovery coke oven battery combustion stacks (\$98.172)) FeFS (Subpart Q - flame suppression) FeFL (Subpart Q - ladle reheater) Q (Other Subpart Q combustion sources not otherwise listed.) HPPU (hydrogen production process units) OCS (Other combustion source)
OtherUnitName	Enter the unit type if "OCS (Other combustion source)" was entered for UnitType.

```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

2.2 Configuration Type 2 Identification

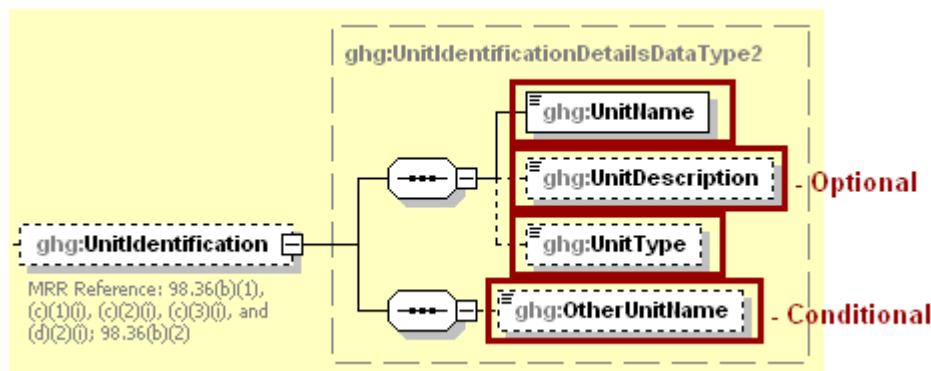

Specific data components are required for Configuration Type 2. See the relevant components boxed in red in the figure below.

Figure 12
Units C Details for Configuration Type 2 Schema Diagram

Each single unit using Tier 4 (CEMS) to calculate emissions must be identified separately so that emissions information can be reported for a specific unit.

Figure 13
Configuration Type 2 Unit Identification Schema Diagram

For configurations of **Type 2 (single unit using Tier 4)**, Subpart C requires the following identification information for each configuration:

- A unique unit name or identifier (e.g., a unit ID number) [98.36(b)(1)]
- An optional unit description or label [optional]
- A code representing the type of unit [98.36(b)(2)]

Table 4
Configuration Type 2 Unit Identification XML Data Elements

Data Element Name	Description
UnitsCDetails	A collection of data elements containing details regarding each stationary fuel combustion unit configuration.
UnitIdentification	A collection of data elements containing the identity of each Subpart C reporting configuration.
UnitName	A user-defined identifier for this unit. Each unit or configuration must have a unique UnitName.
UnitDescription	An optional description or label.
UnitType	<p>A code representing the type of unit. See the list of allowable unit type codes below. If the unit type is not on the list, report “OCS (Other combustion source) and then report the unit type using the OtherUnitName element.</p> <p>PCWD (Pulverized coal, wall-fired, dry bottom) PCWW (Pulverized coal, wall-fired, wet bottom) PCT (Pulverized coal, tangentially-fired) PCO (Pulverized coal, other) CF (Cyclone Furnace) S (Stoker Boiler) BFB (Boiler, bubbling fluidized bed) CFB (Boiler, circulating fluidized bed) PFB (Boiler, pressurized fluidized bed) OFB (Fluidized bed, other) OB (Boiler, other) FLR (Flare) II (Incinerator, institutional)</p>

```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

2.3 Configuration Type 3 Identification

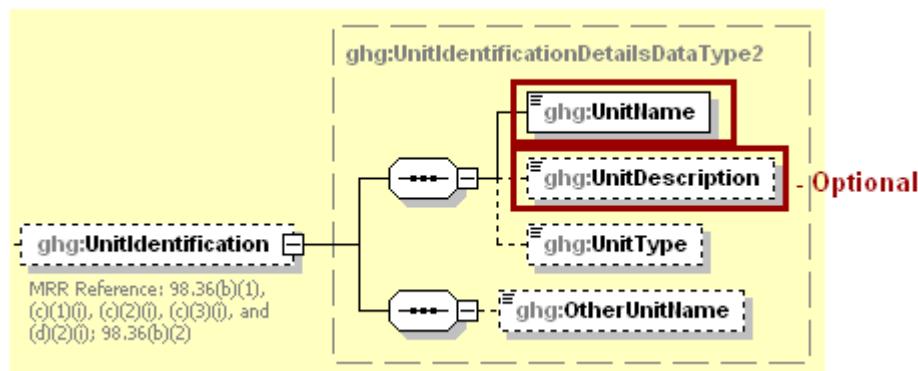

Specific data components are required for Configuration Type 3. See the relevant components boxed in red in the figure below.

Figure 17
Units C Details for Configuration Type 3 Schema Diagram

Each group of units using the aggregation of units reporting alternative must be identified separately so that emissions information can be reported for a specific aggregation of units.

Figure 18
Configuration Type 3 Unit Identification Schema Diagram

For configurations of **Type 3 (aggregation of units)**, Subpart C requires the following identification information for each configuration:

- A unique name or identifier that begins with the prefix “GP” [98.36(c)(1)(i)]
- An optional description or label [optional]

Table 6
Configuration Type 3 Unit Identification XML Data Elements

Data Element Name	Description
UnitsCDetails	A collection of data elements containing details regarding each stationary fuel combustion unit configuration.
UnitIdentification	A collection of data elements containing the identity of each Subpart C reporting configuration.
UnitName	A user-defined identifier for this configuration. Each unit or configuration must have a unique UnitName. For an aggregation of units configuration, report the group name/ID beginning with the prefix "GP".
UnitDescription	An optional description or label. For example, the scope of units included in this configuration may be reported here.

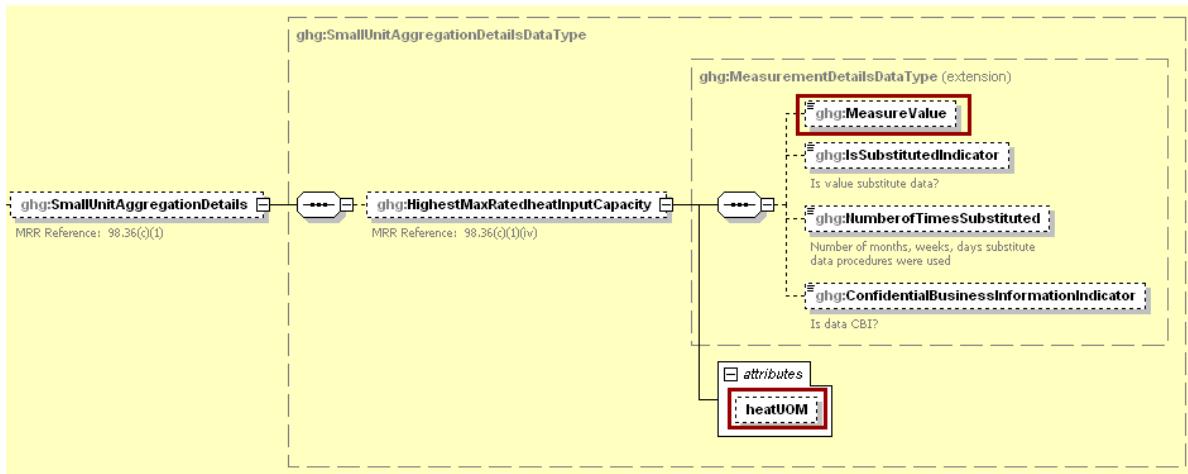

Figure 19
Sample XML Excerpt for Configuration Type 3 Unit Identification

```
<ghg:UnitsCDetails>
  <ghg:UnitIdentification>
    <ghg:UnitName>GP-CT3- Tier 1</ghg:UnitName>
    <ghg:UnitDescription>Tier 1 units</ghg:UnitDescription>
  </ghg:UnitIdentification>
```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

For small unit aggregation details, the value of the highest maximum rated heat input capacity of any unit of the group must be reported.

Figure 20
Small Unit Aggregation Details Schema Diagram

Report the measured value and heat unit of measure in mmBtu/hr only. [98.36(c)(1)(iv)]

Table 7
Small Unit Aggregation Details XML Data Elements

Data Element Name	Description
SmallUnitAggregationDetails	A collection of data elements containing details about an aggregation of units reporting under 98.36(c)(1) as an aggregation of units configuration.
HighestMaxRatedheatInputCapacity	The highest maximum rated heat input capacity of any unit in the group (aggregation of units configuration). Report the measured value only.
HighestMaxRatedheatInputCapacity.heatUOM	mmBtu/hr

</ghg:SmallUnitAggregationDetails>
  
```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

2.4 Configuration Type 4 Identification

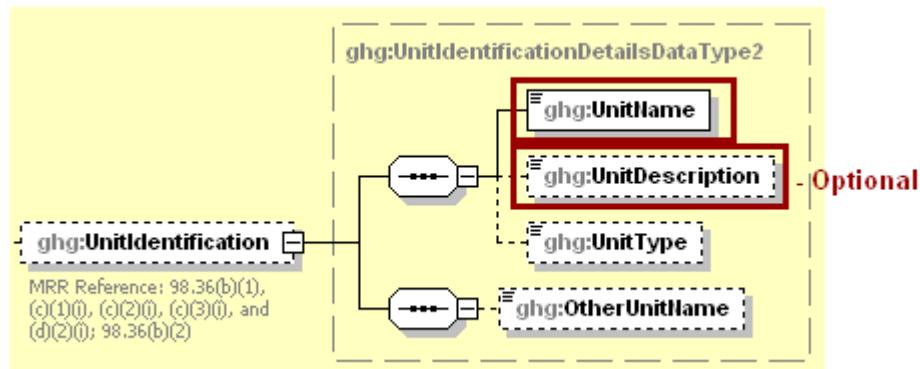

Specific data components are required for Configuration Type 4. See the relevant components boxed in red in the figure below.

Figure 22
Units C Details for Configuration Type 4 Schema Diagram

Each group of units using the common pipe configuration reporting alternative must be identified separately so that emissions information can be reported for a specific group of units.

Figure 23
Configuration Type 4 Unit Identification Schema Diagram

For configurations of **Type 4 (common pipe configurations)**, Subpart C requires the following identification information for each configuration:

- A unique name or identifier that begins with the prefix “CP” [98.36(c)(3)(i)]
- An optional description or label [optional]

Table 8
Configuration Type 4 Unit Identification XML Data Elements

Data Element Name	Description
UnitsCDetails	A collection of data elements containing details regarding each stationary fuel combustion unit configuration.
UnitIdentification	A collection of data elements containing the identity of each Subpart C reporting configuration.
UnitName	A user-defined identifier for this configuration. Each configuration must have a unique UnitName. For common pipe configurations, report the common pipe name/ID beginning with the prefix "CP".
UnitDescription	An optional description or label. For example, the scope of units included in this configuration may be reported here.

Figure 24
Sample XML Excerpt for Configuration Type 4 Unit Identification

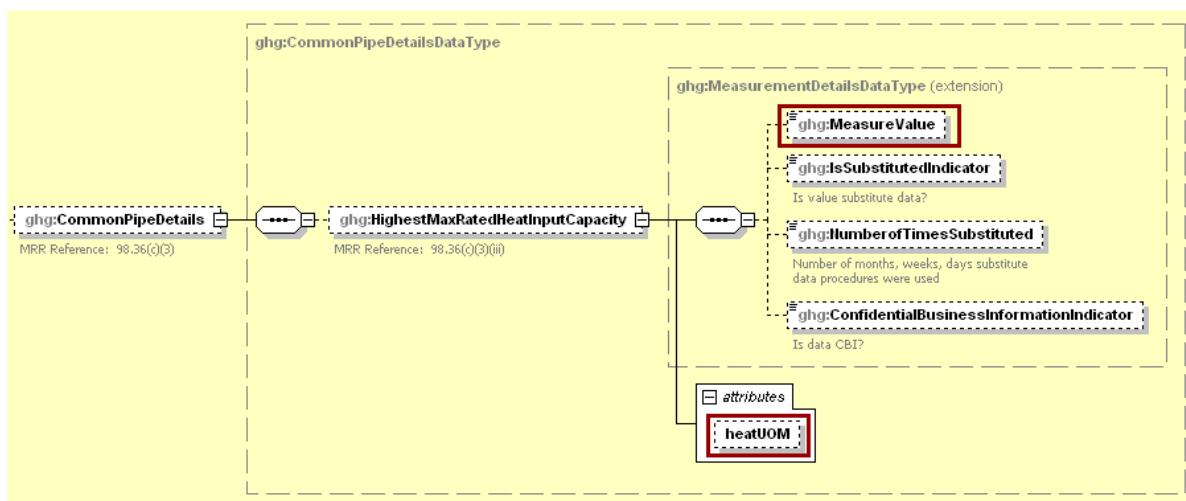

```

<ghg:UnitsCDetails>
  <ghg:UnitIdentification>
    <ghg:UnitName>CP-CT 4- Tier 2</ghg:UnitName>
    <ghg:UnitDescription>Tier 2 unit</ghg:UnitDescription>
  </ghg:UnitIdentification>
</ghg:UnitsCDetails>
  
```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

For common pipe details, the value of the highest maximum rated heat input capacity of any unit served by the common pipe must be reported.

Figure 25
Common Pipe Details Schema Diagram

Report the measured value and heat unit of measure in mmBtu/hr only. [98.36(c)(3)(iii)]

Table 9
Common Pipe Details XML Data Elements

Data Element Name	Description
CommonPipeDetails	A collection of data elements containing details about units reporting under 98.36(c)(3) as a common pipe configuration.
HighestMaxRatedHeatInputCapacity	The highest maximum rated heat input capacity of any unit served by the common pipe (common pipe unit configuration). Report the measured value only.
HighestMaxRatedHeatInputCapacity.heatUOM	mmBtu/hr

Figure 26
Sample XML Excerpt for Common Pipe Details

  </ghg:HighestMaxRatedHeatInputCapacity>
</ghg:CommonPipeDetails>
  
```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

2.5 Configuration Type 5 Identification

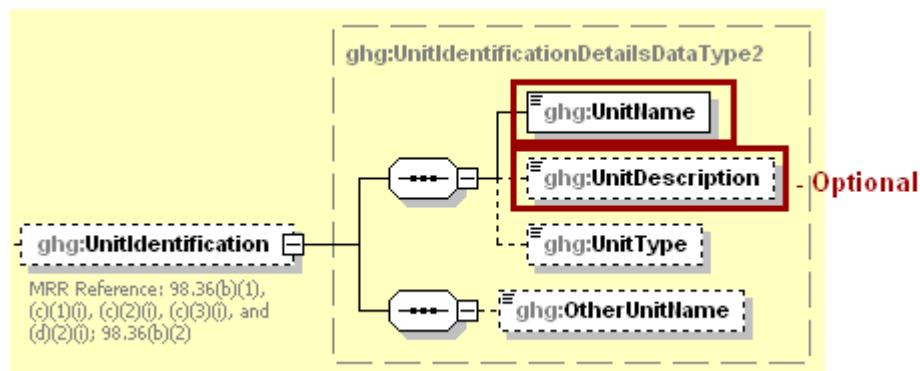

Specific data components are required for Configuration Type 5. See the relevant components boxed in red in the figure below.

Figure 27
Units C Details for Configuration Type 5 Schema Diagram

Each group of units using Tier 4 (CEMS) to calculate emissions and reporting under the monitored common stack or duct configurations reporting alternative must be identified separately so that emissions information can be reported for a specific group of units.

Figure 28
Configuration Type 5 Unit Identification Schema Diagram

For configurations of **Type 5 (monitored common stack or duct configurations)**, Subpart C requires the following identification information for each configuration:

- A unique name or identifier that begins with the prefix “CS” [98.36(c)(2)(i)]
- An optional description or label [optional]

Table 10
Configuration Type 5 Unit Identification XML Data Elements

Data Element Name	Description
UnitsCDetails	A collection of data elements containing details regarding each stationary fuel combustion unit configuration.
UnitIdentification	A collection of data elements containing the identity of each Subpart C reporting configuration.
UnitName	A user-defined identifier for this configuration. Each configuration must have a unique UnitName. For common stack configurations, report the common stack name/ID beginning with the prefix "CS".
UnitDescription	An optional description or label. For example, the scope of units included in this configuration may be reported here.

Figure 29
Sample XML Excerpt for Configuration Type 5 Unit Identification

```

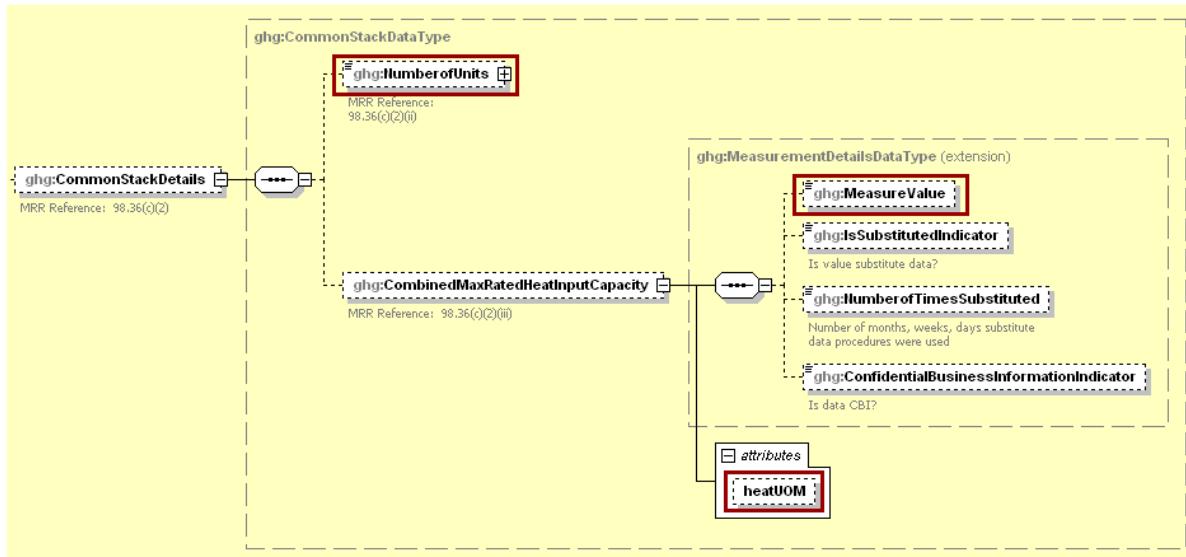

<ghg:UnitsCDetails>
  <ghg:UnitIdentification>
    <ghg:UnitName>CS-CT 5- Tier 4</ghg:UnitName>
    <ghg:UnitDescription>Tier 4 unit</ghg:UnitDescription>
  </ghg:UnitIdentification>
</ghg:UnitsCDetails>
  
```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

For common stack details, the following information must be reported:

- The number of units sharing the common stack [98.36(c)(2)(ii)]
- The combined maximum rated heat input capacity of the units sharing the common stack in mmBtu/hr [98.36(c)(2)(iii)]

Figure 30
Common Stack Details Schema Diagram

For the combined maximum rated heat input capacity, report the measured value and heat unit of measure in mmBtu/hr only.

Table 11
Common Stack Details XML Data Elements

Data Element Name	Description
CommonStackDetails	A collection of data elements containing details about units reporting under 98.36(c)(2) as a common stack or duct configuration.
NumberofUnits	Number of units sharing the common stack or duct. Report “1” when the flue gas flowing through the stack includes combustion products and/or process off-gases and all of the effluent comes from a single unit.
CombinedMaxRatedHeatInputCapacity	Combined maximum rated heat input capacity of the units sharing the common stack or duct. This data element is required only when all of the units sharing the common stack are stationary fuel combustion units (Monitored common stack or duct configuration). Report the measured value only.
CombinedMaxRatedHeatInputCapacity.heatUOM	mmBtu/hr

Figure 31

  </ghg:CombinedMaxRatedHeatInputCapacity>
</ghg:CommonStackDetails>
```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

2.6 Configuration Type 6 Identification

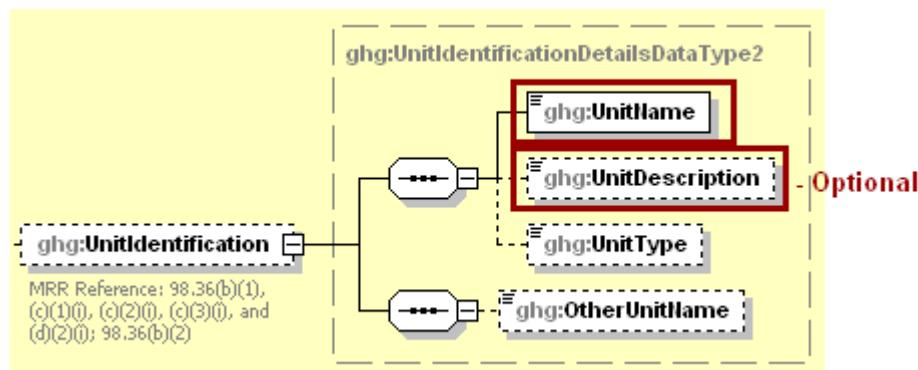

Specific data components are required for Configuration Type 6. See the relevant components boxed in red in the figure below.

Figure 32
Units C Details for Configuration Type 6 Schema Diagram

Each unit, stack or pipe using the alternative CO₂ mass emissions calculation methods provided in 98.33(a)(5) must be identified separately so that emissions information can be reported for the respective unit, stack or pipe.

Figure 33
Configuration Type 6 Unit Identification Schema Diagram

For configurations of **Type 6 (year-round Part 75 heat input reporters)**, Subpart C requires the following identification information for each configuration:

- Unit, stack, or pipe ID numbers. Use the exact same unit, common stack, common pipe, or multiple stack identification numbers that represent the monitored locations (e.g., 1, 2, CS001, MS1A, CP001, etc.) that are reported under 40 CFR 75.64 [98.36(d)(2)(i)]
- An optional description or label [optional]

Table 12
Configuration Type 6 Unit Identification XML Data Elements

Data Element Name	Description
UnitsCDetails	A collection of data elements containing details regarding each stationary fuel combustion unit configuration.
UnitIdentification	A collection of data elements containing the identity of each Subpart C reporting configuration.
UnitName	For part 75 units, use exactly the same name/ID that is reported under §75.64 and that represents the monitored location.
UnitDescription	An optional description or label. For example, the scope of units included in this configuration may be reported here.

Figure 34
Sample XML Excerpt for Configuration Type 6 Unit Identification

    <ghg:UnitDescription>Part 75 unit</ghg:UnitDescription>
  </ghg:UnitIdentification>
  
```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

3.0 Configuration Level Emissions Information

This section of the Subpart C XML reporting instructions covers the requirements for reporting the total sorbent emissions, total biogenic emissions and total fossil fuel emissions at each configuration.

Configurations using either Tier 4 (Configuration Types 2 and 5) or the Part 75 methodologies specified in 98.33(a)(5) (Configuration Type 6) have additional configuration-level requirements specified in Section 5 of these instructions.

The requirements for reporting fuel-specific emissions are specified in Section 4 of these instructions. Note that the reporting of both configuration-level and fuel-specific emissions are required for all configurations types. Also, as with the identification information, each configuration has unique reporting requirements for emissions information.

3.1 Configuration Type 1 Configuration Level Emissions

For configurations of **Type 1 (single unit using Tiers 1, 2, or 3)**, Subpart C requires the following additional information aggregated at the configuration-level:

- The total annual CO₂ mass emissions from sorbent [98.36(b)(10)]
- The total annual biogenic CO₂ mass emissions from the combustion of biomass fuels and the biogenic fraction of CO₂ emissions from fuels with a mixed biogenic and fossil component [98.36(b)(8)(ii)]

Figure 35
Sorbent CO₂ Emissions Quantity and CO₂ Emissions All Biomass Fuels Combined Schema Diagram

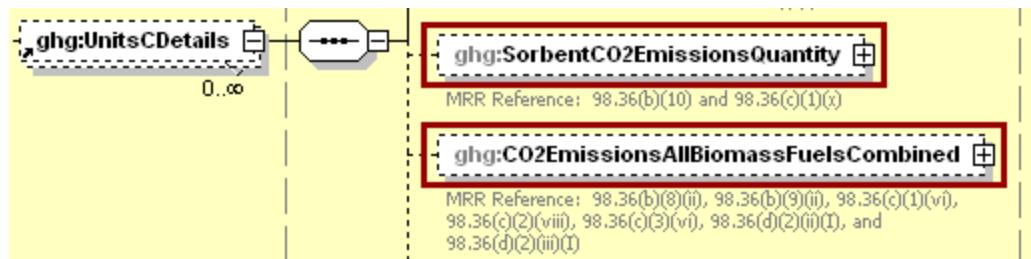

Table 13
Sorbent CO₂ Emissions Quantity and CO₂ Emissions All Biomass Fuels Combined XML Data Elements

Data Element Name	Description
SorbentCO2EmissionsQuantity	The calculated annual CO ₂ emissions (if any) from sorbent. Report the calculated value only.
SorbentCO2EmissionsQuantity.massUOM	Metric Tons

Data Element Name	Description

    <ghg:CalculatedValue>100.0</ghg:CalculatedValue>
</ghg:CO2EmissionsAllBiomassFuelsCombined>

```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

3.2 Configuration Type 3 Configuration Level Emissions

For configurations of **Type 3 (aggregation of units)**, Subpart C requires the following additional information aggregated at the configuration-level:

- The total annual CO₂ mass emissions from sorbent [98.36(c)(1)(x)]
- The total annual biogenic CO₂ mass emissions from the combustion of biomass fuels and the biogenic fraction of CO₂ emissions from fuels with a mixed biogenic and fossil component [98.36(c)(1)(vi)]
- The total annual CO₂ mass emissions from the combustion of fossil fuels and the fossil fraction of CO₂ emissions from fuels with a mixed biogenic and fossil component [98.36(c)(1)(vi)]

Figure 37

</ghg:CO2EmissionsAllFossilFuelsCombined>

```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

3.3 Configuration Type 4 Configuration Level Emissions

For configurations of **Type 4 (non-CEMS group of units sharing common fuel supply pipe)**, Subpart C requires the following additional information aggregated at the configuration-level:

- The total annual biogenic CO₂ mass emissions from the combustion of biomass fuels and the biogenic fraction of CO₂ emissions from fuels with a mixed biogenic and fossil component [98.36(c)(3)(vi)]
- The total annual CO₂ mass emissions from the combustion of fossil fuels and the fossil fraction of CO₂ emissions from fuels with a mixed biogenic and fossil component [98.36(c)(3)(vi)]

Figure 39

</ghg:CO2EmissionsAllFossilFuelsCombined>
  
```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

3.4 Configuration Type 6 Configuration Level Emissions

For configurations of **Type 6 (year-round Part 75 heat input reporters)**, Subpart C requires the following additional information aggregated at the configuration-level:

- The total annual biogenic CO₂ mass emissions from the combustion of biomass fuels and the biogenic fraction of CO₂ emissions from fuels with a mixed biogenic and fossil component [98.36(d)(2)(ii)(I), 98.36(d)(2)(iii)(I)]
 - Report zero for this value if the facility elects to use the option specified in 98.3(c)(12) for the 2010 reporting year (where the facility chooses not to separately report biogenic CO₂ emissions from part 75 units)

Figure 41
CO₂ Emissions All Biomass Fuels Combined Schema Diagram

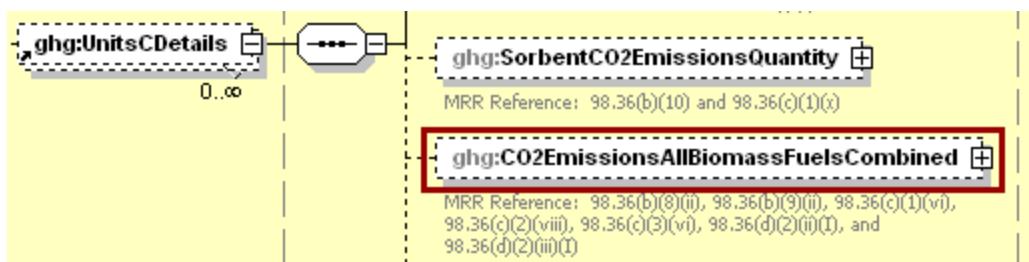

Table 16
CO₂ Emissions All Biomass Fuels Combined XML Data Elements

Data Element Name	Description
CO2EmissionsAllBiomassFuelsCombined	Total annual biogenic CO ₂ mass emissions for a configuration. Report the calculated value only.
CO2EmissionsAllBiomassFuelsCombined.massUOM	Metric Tons

Figure 42

```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

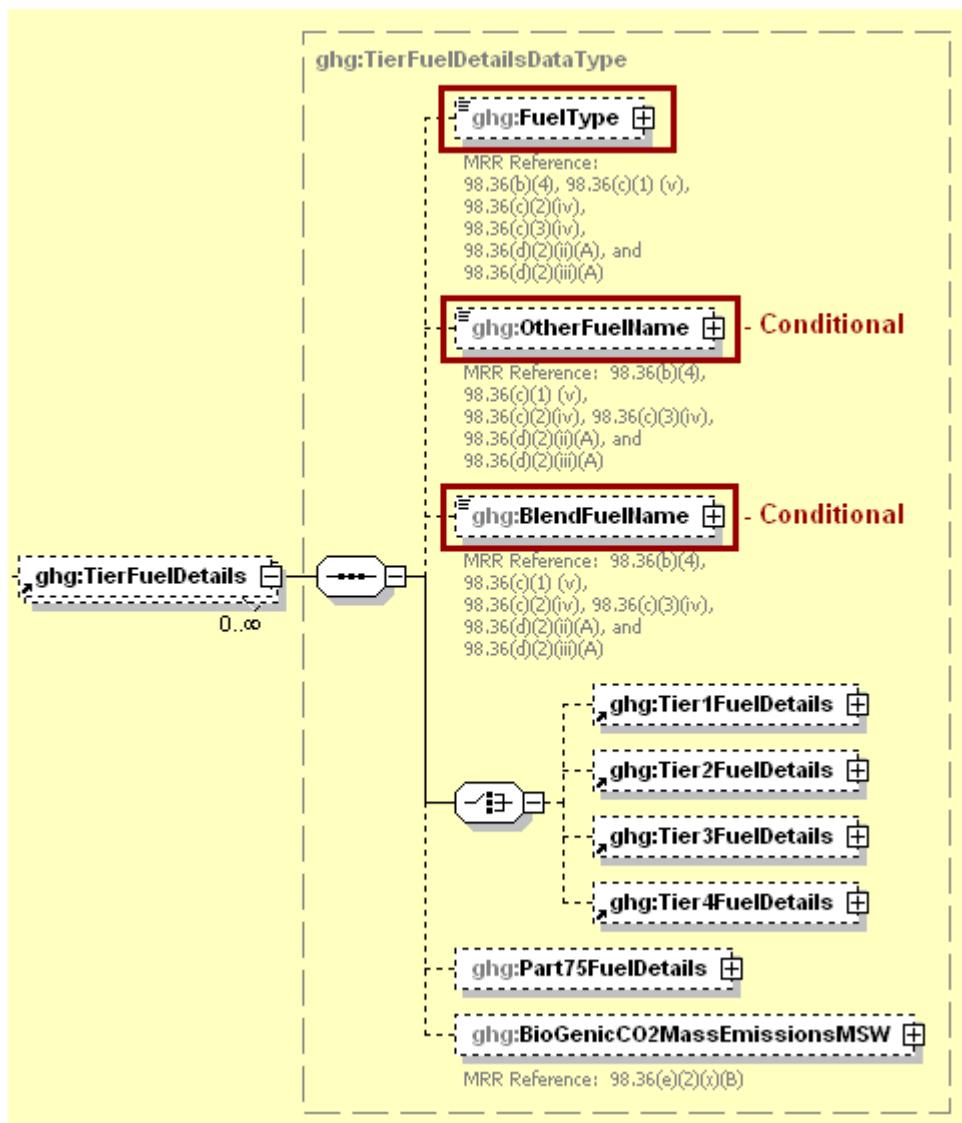

4.0 Fuel Level Emissions by Configuration Type

For configurations of all types, Subpart C requires you to identify the following for **each configuration**:

- The fuel types combusted during the reporting year [98.36(b)(4), 98.36(c)(1)(v), 98.36(c)(2)(iv), 98.36(c)(3)(iv), 98.36(d)(2)(ii)(A), and 98.36(d)(2)(iii)(A)]

Separately report each fuel combusted in the configuration during the report year along with the associated emissions information. The required information for each fuel will depend on which tier was used to calculate CO₂ emissions.

Figure 43
Tier Fuel Details Schema Diagram

Report the fuel type. (See list of allowable fuel types.) If the fuel type does not appear in the list and the use of Tier 3 is required, then specify its name using the "OtherFuelName" element. If a blend of fuels was combusted and the fuels cannot be reported individually, report the blend name using "BlendFuelName".

The user should refer to 98.33(b) to determine which Tier is required for each fuel type at the configuration.

Note that Tiers 1-3 could only apply to Configurations of **Type 1 (single unit using Tiers 1, 2, or 3)**, **Type 3 (aggregation of units)** and **Type 4 (common pipe)**. For each fuel in a configuration, the user will specify which tier is used and which equation was used for that fuel.

For Configurations of **Type 2 (single unit Using Tier 4)** or **Type 5 (common stack or duct)**, the user will report the applicable information for each fuel under the Tier4FuelDetails node.

For Configurations of **Type 6 (Part 75 heat input reporters)**, the user will report the applicable information for each fuel under the Part75FuelDetails node.

Table 17
Tier Fuel Details XML Data Elements

Data Element Name	Description
TierFuelDetails	A collection of data elements containing information regarding the types of fuels combusted in the reporting configuration and broken out by CO ₂ calculation methodology.
FuelType	<p>Specify separately each type of fuel combusted in the reporting configuration during the report year. See list of allowable fuel types below. If reporting an “other” fuel or “blended” fuel, then specify its name using one of the following data elements, "OtherFuelName" or "BlendFuelName" as appropriate.</p> <p>Anthracite Bituminous Subbituminous Lignite Coke Mixed (Commercial sector) Mixed (Industrial coking) Mixed (Industrial sector) Mixed (Electric Power sector) Mixed (Electric Power sector) Plastics Petroleum Coke Municipal Solid Waste Tires Wood and Wood Residuals Agricultural Byproducts Peat Distillate Fuel Oil No. 1 Distillate Fuel Oil No. 2 Distillate Fuel Oil No. 4 Residual Fuel Oil No. 5 Residual Fuel Oil No. 6 Used Oil Kerosene Liquefied petroleum gases (LPG) Propylene Ethane</p>

4.1 Tier 1 Fuel Details

Figure 45

Tier 1 Fuel Details Schema Diagram

For each fuel type (including biomass fuel(s)) in a configuration that uses **Tier 1**, you will be required to specify which Tier 1 equation is used to calculate CO₂ emissions.

The following information is required for each fuel type combusted in the unit:

- Calculation methodology used for the emissions calculation period specified, for each fuel type [98.36(b)(5), 98.36(c)(1)(vii), 98.36(c)(3)(v)]:
 - Tier 1/Equation C-1 - Annual fuel combusted, default heating value, and default CO₂ emission factor
 - Tier 1/Equation C-1a - Annual natural gas usage from billing records (therms) and default CO₂ emission factor
 - Tier 1/Equation C-1b - Annual natural gas usage from billing records (mmBtu) and default CO₂ emission factor
 - Calculation methodology start date and end date for each fuel type [98.36(b)(6)-(7), 98.36(c)(1)(viii)-(ix), 98.36(c)(3)(viii)-(ix)]

Table 18
Tier 1 Fuel Details XML Data Elements

Data Element Name	Description
Tier1FuelDetails	Collection of data elements containing details about tier 1 fuel usage
TierName	The name of the Tier 1 methodology used to calculate emissions for the specified reporting configuration and specified fuel. For example, "Tier 1 (Equation C-1)". See list of allowable values: Tier 1 (Equation C-1) Tier 1 (Equation C-1a, natural gas billing in therms) Tier 1 (Equation C-1b, natural gas billing in mmBtu)
TierMethodologyStartDate	The methodology start date for the specified fuel type.
TierMethodologyEndDate	The methodology end date for the specified fuel type.

Figure 46
Sample XML Excerpt for Tier 1 Fuel Details

```
<ghg:Tier1FuelDetails>
<ghg:TierName>Tier 1 (Equation C-1b, natural gas billing in mmBtu)</ghg:TierName>
<ghg:TierMethodologyStartDate>2010-01-01</ghg:TierMethodologyStartDate>
<ghg:TierMethodologyEndDate>2010-12-31</ghg:TierMethodologyEndDate>
```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

Once the fuel type and CO₂ calculation method are specified, fuel specific emission information must be reported.

For each fuel type (including biomass fuel(s)) for which you have elected to use a **Tier 1 (Equation C-1, C-1a, or C-1b)** methodology, Subpart C requires you to report the following information by fuel type:

- The total annual CO₂ mass emissions derived from Equation C-1, Equation C-1a, or Equation C-1b, in metric tons CO₂ (this value will include both non-biogenic and biogenic CO₂ as applicable) [98.36(b)(8)(i), 98.36(c)(1)(vi), 98.36(c)(3)(vii)]
- The total annual CH₄ mass emissions derived from Equation C-8, Equation C-8a, or Equation C-8b in metric tons CH₄ and in metric tons CO_{2e} (for Table C-2 fuels only) [98.36(b)(8)(i), 98.36(c)(1)(vi), 98.36(c)(3)(vii)]
- The total annual N₂O mass emissions derived from Equation C-8, Equation C-8a, or Equation C-8b in metric tons N₂O and in metric tons CO_{2e} (for Table C-2 fuels only) [98.36(b)(8)(i), 98.36(c)(1)(vi), 98.36(c)(3)(vii)]

Table 19
Tier 1 Emissions Details Node XML Data Elements

Data Element Name	Description
EmissionsDetailsNode	
TotalCO2CombustionEmissions	The total annual CO ₂ mass emissions (including biogenic and non-biogenic CO ₂) for the specified fuel combusted in the reporting configuration, calculated using Equation C-1, C-1a or C-1b. Report the calculated value only.
TotalCO2CombustionEmissions.massUOM	Metric Tons
TotalCH4CombustionEmissions	The total annual CH ₄ mass emissions for the specified fuel combusted in the reporting configuration, calculated using Equation C-8, C-8a or C-8b. Report the calculated value only.
TotalCH4CombustionEmissions.massUOM	Metric Tons
TotalN2OCombustionEmissions	The annual N ₂ O mass emissions for the specified fuel combusted in the reporting configuration, calculated using Equation C-8, C-8a or C-8b. Report the calculated value only.
TotalN2OCombustionEmissions.massUOM	Metric Tons
CH4EmissionsCO2Equivalent	The annual CH ₄ mass emissions for the specified fuel combusted in the reporting configuration, expressed in CO ₂ e. Multiply the calculated value for CH ₄ emissions by the Global Warming Potential of 21 to arrive at the CO ₂ e of the CH ₄ emissions. Report the calculated value only.
CH4EmissionsCO2Equivalent.massUOM	Metric Tons
N2OEmissionsCO2Equivalent	The annual N ₂ O mass emissions for the specified fuel combusted in the reporting configuration, expressed in CO ₂ e. Multiply the calculated value for N ₂ O emissions by the Global Warming Potential of 310 to arrive at the CO ₂ e of the N ₂ O emissions. Report the calculated value only.
N2OEmissionsCO2Equivalent.massUOM	Metric Tons

4.2 Tier 2 Fuel Details

Figure 48
Tier 2 Fuel Details Schema Diagram

For each fuel type (including biomass fuel(s)) in a configuration that uses **Tier 2**, you will be required to specify which Tier 2 equation is used to calculate CO₂ emissions.

The following information is required for each fuel type combusted in the unit:

- Calculation methodology used for the emissions calculation period specified, for each fuel type [98.36(b)(5), 98.36(c)(1)(vii), 98.36(c)(3)(v)]:
 - Tier 2/Equation C-2a - Annual fuel combusted, measured heating value, and default CO₂ emission factor
 - Tier 2/Equation C-2c – Steam generation, ratio of maximum rated heat input capacity to design rated steam output capacity, and default CO₂ emission factor (for MSW and solid fuels listed in Table C-1))
- Calculation methodology start date and end date for each fuel type [98.36(b)(6)-(7), 98.36(c)(1)(viii)-(ix), 98.36(c)(3)(viii)-(ix)]

Table 20
Tier 2 Fuel Details XML Data Elements

Data Element Name	Description
Tier2FuelDetails	Collection of data elements containing details about tier 2 fuel usage
TierName	The name of the Tier 2 methodology used to calculate emissions for the specified reporting configuration. See list of allowable values: Tier 2 (Equation C-2a) Tier 2 (Equation C-2c, steam generation)
TierMethodologyStartDate	The methodology start date for the specified fuel type.
TierMethodologyEndDate	The methodology end date for the specified fuel type.

```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

For each fuel type (including biomass fuel(s)) for which you have elected to use the **Tier 2/Equation C-2a** methodology, Subpart C requires you to report the following information by fuel type:

- Identification of each month for which HHVs were calculated using one or more substitute data values [98.36(e)(2)(ii)(C)]
- The frequency of the HHV determinations [98.36(e)(2)(ii)(B)]
 - Hourly
 - Daily
 - Weekly
 - Monthly
 - Semiannually
 - Quarterly
 - Once per fuel lot
 - Upon addition of oil to the storage tank
 - Other (specify)

Table 21

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

For each fuel type (including biomass fuel(s)) for which you have elected to use the **Tier 2/Equation C-2a** methodology, Subpart C requires you to report the following information by fuel type:

- The total annual CO₂ mass emissions derived from Equation C-2a, in metric tons CO₂ (this value will include both non-biogenic and biogenic CO₂ as applicable) [98.36(b)(8)(i), 98.36(c)(1)(vi), 98.36(c)(3)(vii)]
- The total annual CH₄ mass emissions derived from Equation C-9a, in metric tons CH₄ and in metric tons CO_{2e} (for Table C-2 fuels only) [98.36(b)(8)(i), 98.36(c)(1)(vi), 98.36(c)(3)(vii)]
- The total annual N₂O mass emissions derived from Equation C-9a, in metric tons N₂O and in metric tons CO_{2e} (for Table C-2 fuels only) [98.36(b)(8)(i), 98.36(c)(1)(vi), 98.36(c)(3)(vii)]

For each fuel type (including biomass fuel(s)) for which you have elected to use the **Tier 2/Equation C-2c** methodology, Subpart C requires you to report the following information by fuel type:

- The total annual CO₂ mass emissions derived from Equation C-2c, in metric tons CO₂ (this value will include both non-biogenic and biogenic CO₂ as applicable) [98.36(b)(8)(i), 98.36(c)(1)(vi), 98.36(c)(3)(vii)]
- The total annual CH₄ mass emissions derived from Equation C-9b, in metric tons CH₄ and in metric tons CO_{2e} (for Table C-2 fuels only) [98.36(b)(8)(i), 98.36(c)(1)(vi), 98.36(c)(3)(vii)]
- The total annual N₂O mass emissions derived from Equation C-9b, in metric tons N₂O and in metric tons CO_{2e} (for Table C-2 fuels only) [98.36(b)(8)(i), 98.36(c)(1)(vi), 98.36(c)(3)(vii)]

Table 22
Tier 2 Monthly HHV Details Emissions Details Node XML Data Elements

Data Element Name	Description
EmissionsDetailsNode	A collection of data element containing the annual CO ₂ , CH ₄ , and N ₂ O mass emissions from combustion of the specific fuel type in the unit configuration. Express in metric tons of the specific gas and in metric tons of CO _{2e} .
TotalCO2CombustionEmissions	The total annual CO ₂ mass emissions (including biogenic and non-biogenic CO ₂) for the specified fuel combusted in the reporting configuration, calculated using Equation C-2a or C-2c. Report the calculated value only.
TotalCO2CombustionEmissions.massUOM	Metric Tons
TotalCH4CombustionEmissions	The total annual CH ₄ mass emissions for the specified fuel combusted in the reporting configuration, calculated using Equation C-9a or C-9b. Report the calculated value only.
TotalCH4CombustionEmissions.massUOM	Metric Tons
TotalN2OCombustionEmissions	The total annual N ₂ O mass emissions for the specified fuel combusted in the reporting configuration, calculated using Equation C-9a or C-9b expressed in mass of N ₂ O. Report the calculated only.
TotalN2OCombustionEmissions.massUOM	Metric Tons

Data Element Name	Description
CH4EmissionsCO2Equivalent	The annual CH ₄ mass emissions for the specified fuel combusted in the reporting configuration, expressed in CO ₂ e. Multiply the calculated value for CH ₄ emissions by the Global Warming Potential of 21 to arrive at the CO ₂ e of the CH ₄ emissions. Report the calculated value only.
CH4EmissionsCO2Equivalent.massUOM	Metric Tons
N2OEmissionsCO2Equivalent	The annual N ₂ O mass emissions for the specified fuel combusted in the reporting configuration, expressed in CO ₂ e. Multiply the calculated value for N ₂ O emissions by the Global Warming Potential of 310 to arrive at the CO ₂ e of the N ₂ O emissions. Report the calculated value only.

4.3 Tier 3 Fuel Details

Figure 52
Tier 3 Fuel Details Schema Diagram

For each fuel type (including biomass fuel(s)) in a configuration that uses **Tier 3**, you will be required to specify which Tier 3 equation is used to calculate CO₂ emissions.

The following information is required for each fuel type combusted in the unit:

- Calculation methodology used for the emissions calculation period specified, for each fuel type [98.36(b)(5), 98.36(c)(1)(vii), 98.36(c)(3)(v)]:
 - Tier 3/Equation C-3 – Annual mass of solid fuel combusted and average carbon content of the solid fuel
 - Tier 3/Equation C-4 – Annual mass of liquid fuel combusted and average carbon content of the liquid fuel
 - Tier 3/Equation C-5 – Annual volume of gaseous fuel combusted, average carbon content of the gaseous fuel, and average molecular weight of the gaseous fuel
- Calculation methodology start date and end date, for each fuel type [98.36(b)(6)-(7), 98.36(c)(1)(viii)-(ix), 98.36(c)(3)(viii)-(ix)]

Table 23
Tier 3 Fuel Details XML Data Elements

Data Element Name	Description
Tier3FuelDetails	Collection of data elements containing details about tier 3 fuel usage.
TierName	The name of the Tier 3 methodology used to calculate emissions for the specified unit or unit configuration. See list of allowable values: Tier 3 (Equation C-3, solid fuel) Tier 3 (Equation C-4, liquid fuel) Tier 3 (Equation C-5, gaseous fuel)
TierMethodologyStartDate	The methodology start date for the specified fuel type.
TierMethodologyEndDate	The methodology end date for the specified fuel type.

  <ghg:TierMethodologyEndDate>2010-12-31</ghg:TierMethodologyEndDate>
```

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

For each fuel type (including biomass fuel(s)) for which you have elected to use a **Tier 3 (Equation C-3, C-4, or C-5)** methodology, Subpart C requires you to report the following information by fuel type:

- The total annual CO₂ mass emissions derived from Equation C-3 for solid fuels, Equation C-4 for liquid fuels, or Equation C-5 for gaseous fuels, in metric tons CO₂ (this value will include both non-biogenic and biogenic CO₂ as applicable) [98.36(b)(8)(i), 98.36(c)(1)(vi), 98.36(c)(3)(vii)]
- The total annual CH₄ mass emissions derived from Equation C-8, in metric tons CH₄ and in metric tons CO_{2e} (for Table C-2 fuels only) [98.36(b)(8)(i), 98.36(c)(1)(vi), 98.36(c)(3)(vii)]
- The total annual N₂O mass emissions derived from Equation C-8, in metric tons N₂O and in metric tons CO_{2e} (for Table C-2 fuels only) [98.36(b)(8)(i), 98.36(c)(1)(vi), 98.36(c)(3)(vii)]
- The frequency of carbon content determinations [98.36(e)(2)(iv)(B)]
 - Hourly
 - Daily
 - Weekly
 - Monthly
 - Semiannually
 - Quarterly
 - Once per fuel lot
 - Upon addition of oil to the storage tank
 - Other (specify)
- The total number of carbon content substitute data values [98.36(e)(2)(iv)(E)]
- The total number of valid carbon content determinations [98.36(e)(2)(iv)(D)]
- The total number of operating hours in the reporting year for which missing data substitution was used for fuel usage [98.3(c)(8)]

For each gaseous fuel at each configuration for which you have elected to use the **Tier 3/Equation C-5 methodology**, Subpart C also requires you to report the following additional information:

- Frequency of molecular weight determinations [98.36(e)(2)(iv)(B)]
 - Hourly
 - Daily
 - Weekly
 - Monthly
 - Semiannually
 - Quarterly
 - Other (specify)
- Total number of molecular weight substitute data values [98.36(e)(2)(iv)(E)]
- Total number of valid molecular weight determinations [98.36(e)(2)(iv)(D)]

Table 24

4.4 Tier 4 Fuel Details

Figure 55
Tier 4 Fuel Details Schema Diagram

When a **Tier 4 (CEMS)** configuration is used, you are required to report the following information for each fuel type listed in Table C-2 (including biomass fuel(s)):

- The total annual CH₄ mass emissions derived from Equation C-10, in metric tons CH₄ and in metric tons CO_{2e} [98.36(b)(9)(iii), 98.36(c)(2)(ix)]
- The total annual N₂O mass emissions derived from Equation C-10, in metric tons N₂O and in metric tons CO_{2e} [98.36(b)(9)(iii), 98.36(c)(2)(ix)]

Table 25
Tier 4 Fuel Details XML Data Elements

Data Element Name	Description
Tier4FuelDetails	A collection of data elements containing information for fuels that are combusted in configurations that use Tier 4.
EmissionsDetailsNode	The annual emissions by type of fuel.
TotalCH4CombustionEmissions	The total annual CH ₄ mass emissions for the specified fuel combusted in the reporting configuration, calculated using Equation C-10. Report the calculated value only.
TotalCH4CombustionEmissions.massUOM	Metric Tons
TotalN2OCombustionEmissions	The total annual N ₂ O mass emissions for the specified fuel combusted in the reporting configuration, calculated using Equation C-10. Report the calculated value only.
TotalN2OCombustionEmissions.massUOM	Metric Tons
CH4EmissionsCO2Equivalent	The total annual CH ₄ mass emissions for the specified fuel combusted in the reporting configuration. Multiply the calculated value for CH ₄ emissions by the Global Warming Potential of 21 to arrive at the CO _{2e} of the CH ₄ emissions. Report the calculated value only.
CH4EmissionsCO2Equivalent.massUOM	Metric Tons
N2OEmissionsCO2Equivalent	The total annual N ₂ O mass emissions for the specified fuel combusted in the reporting configuration. Multiply the calculated value for N ₂ O emissions by the Global Warming Potential of 310 to arrive at the CO _{2e} of the N ₂ O emissions. Report the calculated value only.
N2OEmissionsCO2Equivalent.massUOM	Metric Tons

4.5 Part 75 Fuel Details

Figure 57
Part 75 Fuel Details Schema Diagram

For configurations using the alternative CO₂ mass emissions calculation methods provided in **98.33(a)(5) (Year-round Part 75 heat input reporters)**, Subpart C requires the following information for each fuel type listed in Table C-2 (including biomass fuel(s)) except as otherwise provided in 98.33(c)(4)(ii)(D)):

- The total annual CH₄ mass emissions derived from Equation C-10, in metric tons CO₂e [98.36(d)(2)(ii)(H), 98.36(d)(2)(iii)(H)]
- The total annual N₂O mass emissions derived from Equation C-10, in metric tons CO₂e [98.36(d)(2)(ii)(H), 98.36(d)(2)(iii)(H)]

For each fuel, CH₄ and N₂O emissions should be reported at the same level (i.e. monitoring location) as CO₂ emissions are reported.

Table 26
Part 75 Fuel Details XML Data Elements

Data Element Name	Description
Part75FuelDetails	Collection of data elements pertaining to annual CH ₄ and N ₂ O emissions from certain Part 75 units that calculate CO ₂ emissions according to 98.33(a)(5).
CH4EmissionsCO2Equivalent	The total annual CH ₄ mass emissions for the specified fuel combusted at each monitored location, calculated using Equation C-10. Report the calculated value only.
CH4EmissionsCO2Equivalent.massUOM	Metric Tons
N2OEmissionsCO2Equivalent	The total annual N ₂ O mass emissions for the specified fuel combusted at each monitored location, calculated using Equation C-10. Report the calculated value only.
N2OEmissionsCO2Equivalent.massUOM	Metric Tons

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

5.0 Additional Configuration Level Emission Reporting

5.1 Tier 4 Details

For configurations of Type 2 and Type 5, Subpart C requires additional information aggregated at the configuration-level.

Figure 59
Tier 4 Details Schema Diagram

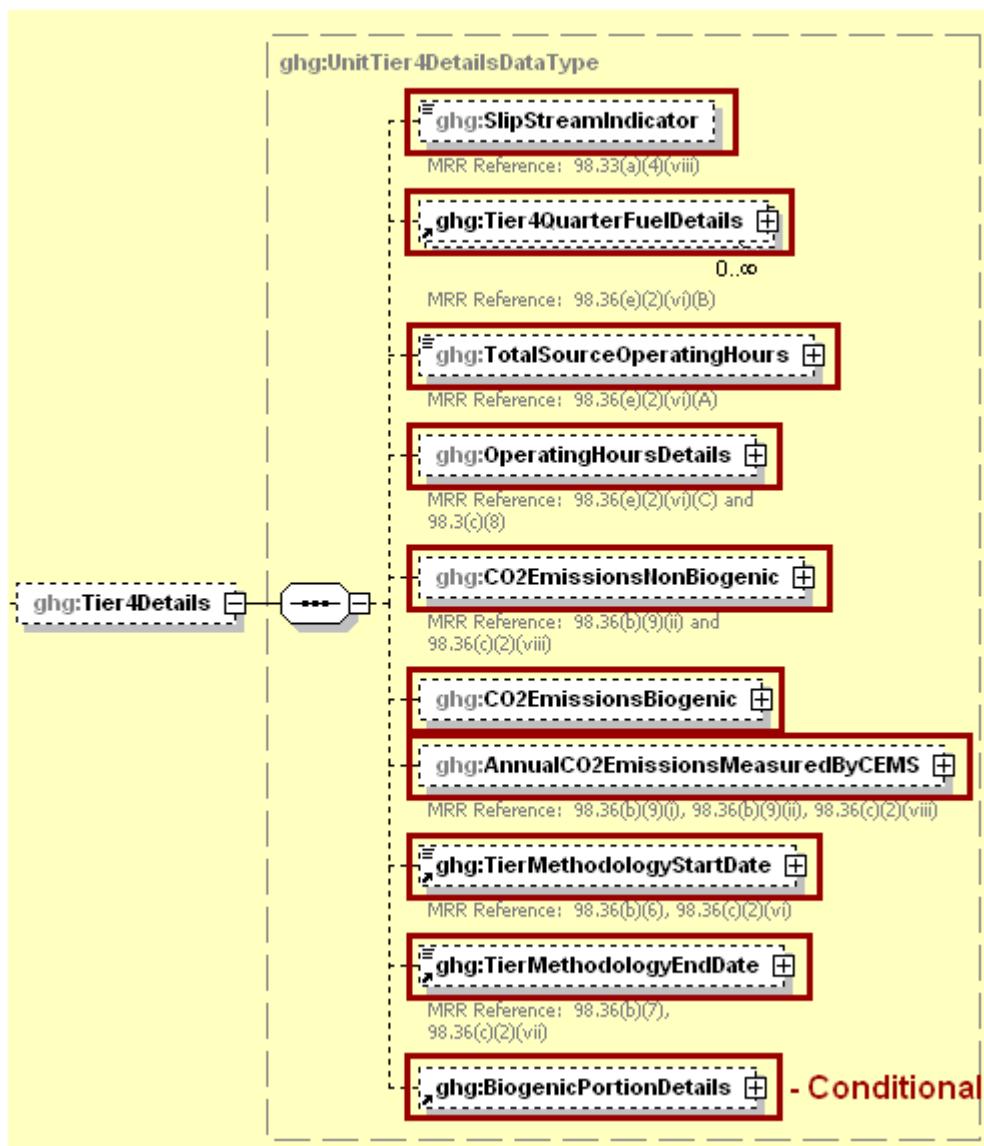

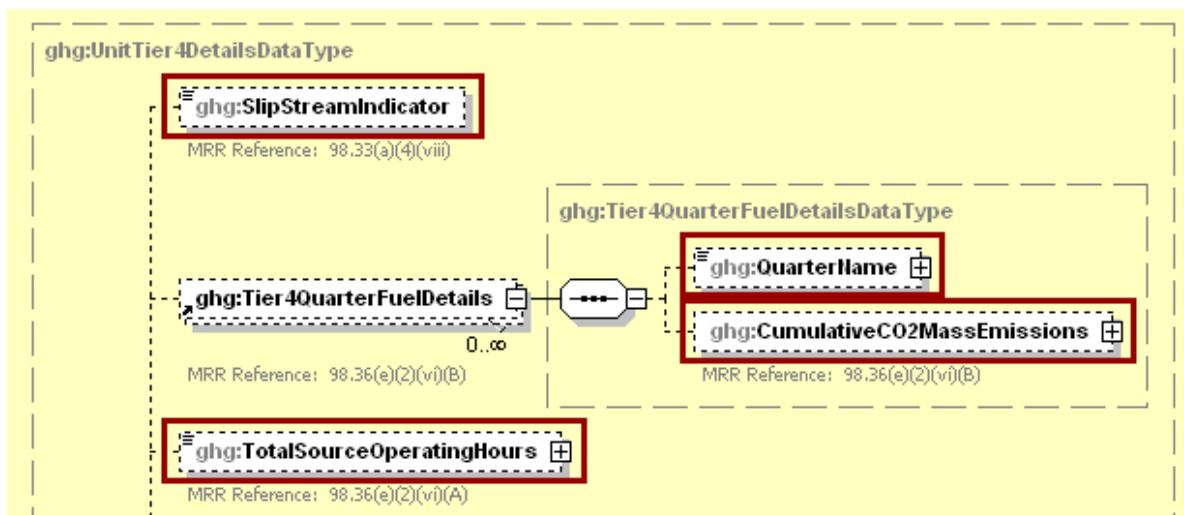

Figure 60
Tier 4 Quarter Details Schema Diagram

For configurations of Type 2 and Type 5, report the following information:

- Specify if emissions reported for the CEMS include emissions calculated according to 98.33(a)(4)(viii) for a slipstream that bypassed the CEMS [98.33(a)(4)(viii)]
- The cumulative CO₂ mass emissions for each quarter during the reporting year [98.36(e)(2)(vi)(B)]
- The total number of source operating hours in the reporting year [98.36(e)(2)(vi)(A)]

Table 27
Tier 4 Details XML Data Elements

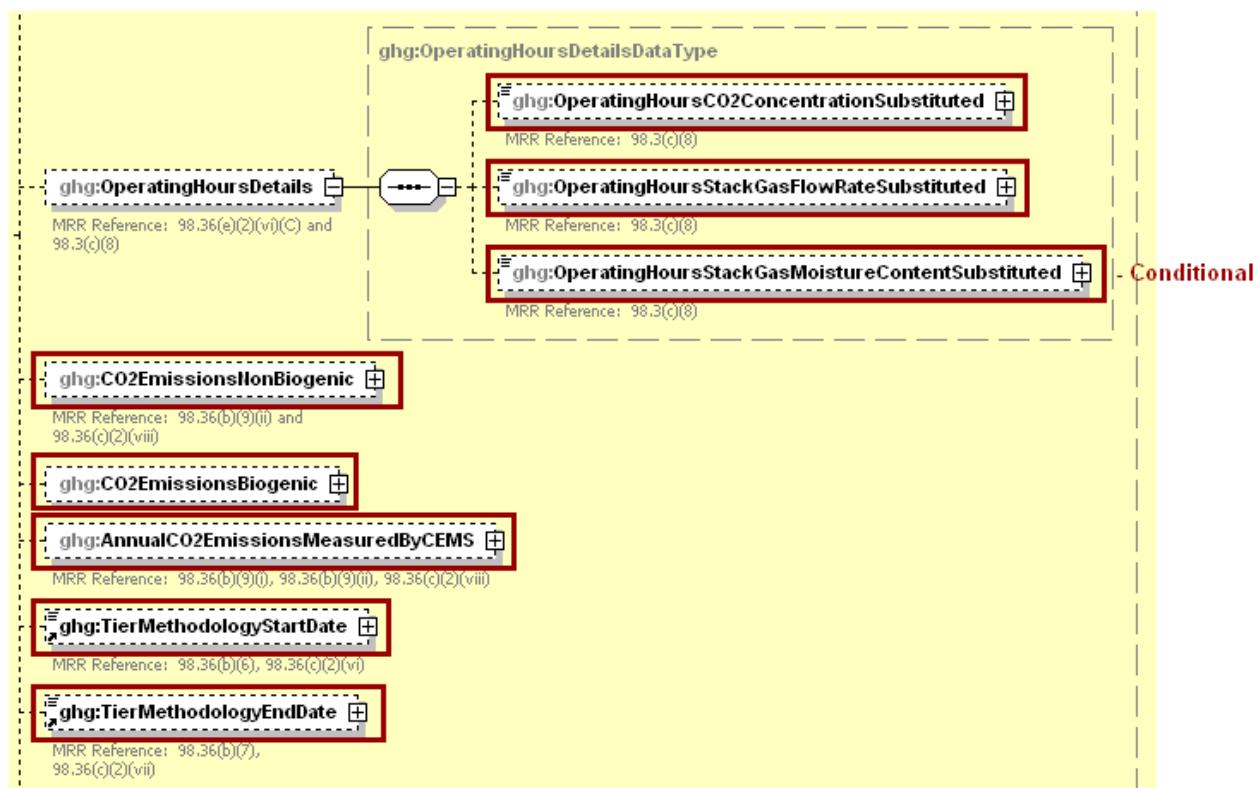

Data Element Name	Description
Tier4Details	A collection of data elements containing information regarding units that use Tier 4 only.
SlipStreamIndicator	An indication (Y/N) that the emissions reported for the CEMS include emissions calculated according to 98.33(a)(4)(viii) for a slipstream that bypassed the CEMS.
Tier4QuarterFuelDetails	
QuarterName	The name of the quarter. See list of allowable values: First Quarter Second Quarter Third Quarter Fourth Quarter
CumulativeCO2MassEmissions	The cumulative CO ₂ mass emissions for the specified quarter of the reporting year. The cumulative value is the sum of hourly emissions for the respective quarter only (for example, for the fourth quarter, the emissions will be summed for the fourth quarter only, not from all four quarters in the year). Report the calculated value only.
CumulativeCO2MassEmissions.massUOM	Metric Tons
TotalSourceOperatingHours	The total number of source operating hours in the reporting year.

Note: The code excerpt above is presented here to demonstrate the concept of reporting greenhouse gas emissions data.

Figure 62
Operating Hours Details Schema Diagram

For configurations of Type 2 and Type 5, report the following information:

- The total operating hours in which a substitute data value was used in the emissions calculations for the CO₂ concentration parameter [98.36(e)(2)(vi)(C), 98.3(c)(8)]
- The total operating hours in which a substitute data value was used in the emissions calculations for the stack gas flow rate parameter [98.36(e)(2)(vi)(C), 98.3(c)(8)]
- The total operating hours in which a substitute data value was used in the emissions calculations for the stack gas moisture content parameter (if moisture correction is required and a continuous moisture monitor is used) [98.36(e)(2)(vi)(C), 98.3(c)(8)]
- The total annual non-biogenic CO₂ mass emissions (i.e. CO₂ mass emissions from fossil fuels, sorbent use, and process emissions) [98.36(b)(9)(ii)]
- The total annual biogenic CO₂ mass emissions [98.36(b)(9)(ii)]
- The total annual CO₂ mass emissions measured by the CEMS (this includes both biogenic and non-biogenic CO₂) [98.36(b)(9)(i)-(ii)]
- The methodology start date and end date for the configuration [98.36(b)(6)-(7)]

Table 28
Operating Hours Details XML Data Elements

Data Element Name	Description
OperatingHoursDetails	A collection of data elements containing details about the percentage of source operating hours in which a substitute data value was in the emissions calculations.
OperatingHoursCO2ConcentrationSubstituted	The total operating hours in which a substitute data value was used in the emissions calculations for the CO ₂ concentration parameter (if an O ₂ monitor is used to calculate CO ₂ concentration, report missing data for the O ₂ monitor here).
OperatingHoursStackGasFlowRateSubstituted	The total operating hours in which a substitute data value was used in the emissions calculations for the stack gas flow rate parameter.
OperatingHoursStackGasMoistureContentSubstituted	If moisture correction is required and a continuous moisture monitor is used, the total operating hours in which a substitute data value was used in the emissions calculations for the stack gas moisture content parameter.
CO2EmissionsNonBiogenic	Total annual non-biogenic CO ₂ mass emissions (includes fossil fuel, sorbent, process CO ₂ emissions and fossil CO ₂ from fuels with mixed fossil and biogenic components). Report the calculated value only.
CO2EmissionsNonBiogenic.massUOM	Metric Tons
CO2EmissionsBiogenic	Total annual biogenic CO ₂ mass emissions from biomass fuels and the biogenic CO ₂ from fuels with mixed fossil and biogenic components (i.e. MSW or tires). Report the calculated value only.
CO2EmissionsBiogenic.massUOM	Metric Tons
AnnualCO2EmissionsMeasuredByCEMS	The total annual CO ₂ mass emissions measured by the CEMS (this includes both biogenic and non-biogenic CO ₂). Report the calculated value only.
AnnualCO2EmissionsMeasuredByCEMS.massUOM	Metric Tons
TierMethodologyStartDate	The tier methodology start date for the specified reporting configuration.
TierMethodologyEndDate	The tier methodology end date for the specified reporting configuration.

Figure 64
Biogenic Portion Details Schema Diagram

If biogenic CO₂ emissions were estimated using the methodology described by Equations C-12, C-13, and C-14 (see section 98.33(e)(2)), the following addition information is also required by Subpart C for configurations of Type 2 and 5:

- The total annual volume of CO₂ emitted from the combustion of all fossil fuels, Vff [98.36(e)(2)(ix)(B)]
- The total annual volume of CO₂ emitted from the combustion of all fuels, Vtotal [98.36(e)(2)(ix)(A)]
- The total annual volume of CO₂ emitted from the combustion of all biomass fuels, Vbio [98.36(e)(2)(ix)(C)]
- The total annual biogenic CO₂ mass emissions calculated using the procedures in 98.33(e)(2) [98.36(e)(2)(ix)(G)]

Please note that the BiogenicPortionDetails parent element is not related to the ASTM biogenic fraction [98.36(e)(2)(x)(A)] reporting requirement which was deferred.

Table 29
Biogenic Portion Details XML Data Elements

Data Element Name	Description
BiogenicPortionDetails	
Vff	The annual volume of CO ₂ emitted from the combustion of all fossil fuels. (Equation C-13) Report the measured value only.
Vff.volUOM	scf
VTotal	The total annual volume of CO ₂ emitted from the combustion of all fuels. Sum of all hourly volume of CO ₂ values (VCO ₂ h) for the reporting year (Equation C-12). Report the measured value only.
VTotal.volUOM	scf
VBio	The annual volume of CO ₂ from the combustion of all biomass fuels. Subtract Vff from Vtotal (and any process emissions from a unit that is subject to another subpart of part 98).
VBio.volUOM	scf
AnnualBiogenicCO2Emission	The total annual biogenic CO ₂ mass emissions. Applicable only if the total emissions measured by the CEMS includes biogenic emissions and those emissions were calculated according to 98.33(e)(2). Report the calculated value for biogenic CO ₂ emissions only. This value should be the same as reported for the data element CO2EmissionsBiogenic.
AnnualBiogenicCO2Emission.massUOM	Metric Tons

5.2 Part 75 Details

Figure 66
Part 75 Details Schema Diagram

For configurations of **Type 6 (year-round Part 75 heat input reporters)**, Subpart C requires the following additional information aggregated at the configuration-level:

- The total annual CO₂ mass emissions at the monitored location [98.36(d)(2)(ii)(F), 98.36(d)(2)(iii)(F)]
- The methodology start date and end date [98.36(d)(ii)(C)-(D), 98.36(d)(iii)(C)-(D)]
- An indication of the Part 75 heat input method used (Appendix D method, Low Mass Emissions calculation method in 40 CFR 75.19, or CEMS calculation method) [98.36(d)(2)(ii)(E), 98.36(d)(2)(iii)(E)]
- The Part 75 methodology used to calculate the CO₂ mass emissions (Appendix D and G calculation method, Low Mass Emissions calculation method in 40 CFR 75.19, or CEMS calculation method) [98.36(d)(2)(ii)(B), 98.36(d)(2)(iii)(B)].

Table 30
Part 75 Details XML Data Elements

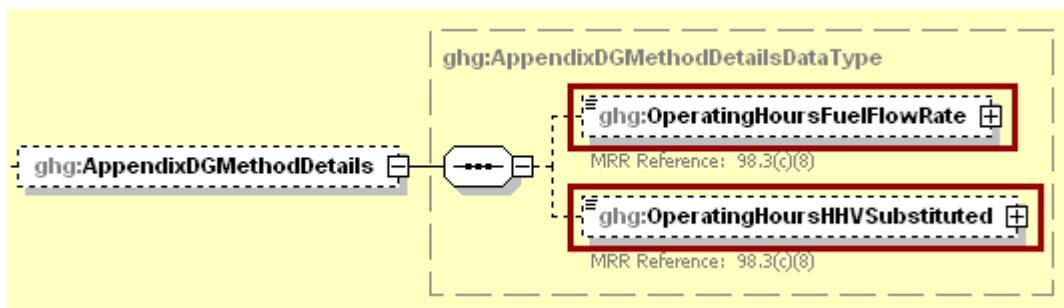

Data Element Name	Description
Part75Details	A collection of data elements containing information for certain Part 75 units that use the alternative calculation methods in 98.33(a)(5).
AnnualCO2EmissionsMeasuredByPart75Method	The total annual CO ₂ emissions measured at the monitored location using the applicable Part 75 methodology (include both biogenic and non-biogenic CO ₂). Report the calculated value only.
AnnualCO2EmissionsMeasuredByPart75Method.massUOM	Metric Tons
TierMethodologyStartDate	The methodology start date for the specified reporting configuration.
TierMethodologyEndDate	The methodology end date for the specified reporting configuration.
Part75HeatInputMethod	The method used to measure the Part 75 heat input. See list of allowable values: Appendix D LME---40 CFR 75.19 CEMS
PartCO2Method	The Part 75 method used to calculate the CO ₂ emissions. See list of allowable values: Appendix D and G calculation method--- § 98.33(a)(5)(i) LME calculation method in 40 CFR 75.19--- § 98.33(a)(5)(ii) CEMS calculation method--- § 98.33(a)(5)(iii)

Figure 70
CEMS Details Schema Diagram

For configurations of **Type 6 (year-round Part 75 heat input reporters)**, Subpart C requires the following additional information aggregated at the configuration-level if the Part 75 methodology used to calculate the CO₂ mass emissions is CEMS calculation method:

- The total number of source operating hours in the reporting year that the CO₂ concentration parameter was missing (if an O₂ monitor is used to calculate CO₂ concentration, report missing data for the O₂ monitor here) [98.3(c)(8)]
- The total number of source operating hours in the reporting year that the stack gas flow rate parameter was missing [98.3(c)(8)]
- The total number of source operating hours in the reporting year that the moisture content parameter was missing (if a continuous monitor is in use) [98.3(c)(8)]

Table 32
CEMS Details XML Data Elements

Data Element Name	Description
CEMSDetails	A collection of data elements pertaining to the number of hours missing data procedures were for each unit or stack in which the facility selects "CEMS" as the Part 75 methodology used to determine CO ₂ mass emissions
OperatingHoursCO2ConcentrationSubstituted	The total operating hours in which a substitute data value was used in the emissions calculations for the CO ₂ concentration parameter.
OperatingHoursStackGasFlowRateSubstituted	The total operating hours in which a substitute data value was used in the emissions calculations for the stack gas flow rate parameter.
OperatingHoursStackGasMoistureContentSubstituted	If moisture correction is required and a continuous moisture monitor is used, the total operating hours in which a substitute data value was used in the emissions calculations for the stack gas moisture content parameter.

6.0 Facility Level Roll-up Emissions

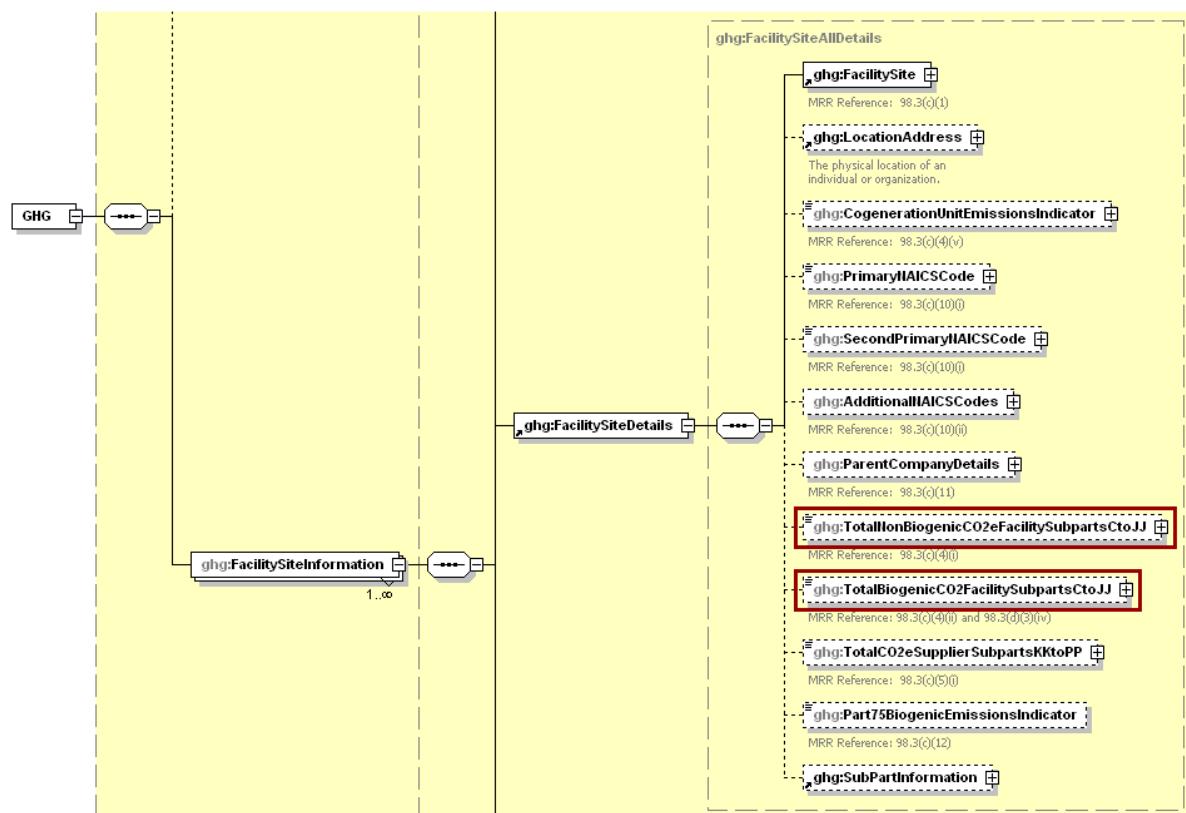

Each facility must report the following facility-level emission totals:

- Total CO₂ equivalent (CO₂e) emissions (excluding biogenic CO₂) aggregated across all direct emitter source categories (subparts C-HH) associated with the facility.
- Total biogenic CO₂ emissions aggregated across all direct emitter source categories (subparts C-HH) associated with the facility.

Each supplier must report the following supplier totals:

- Total CO₂e associated with products supplied aggregated across subparts NN, OO and PP (as applicable). Do not include subpart LL and MM totals in this data element as these values are not being collected in e-GGRT.

Figure 72
Facility Level Roll-up Emissions Schema Diagram

For Subpart C, report total emissions for CO₂e (excluding biogenic CO₂) and biogenic CO₂ using the following guidelines.

- 1) Add the total CO₂e value for Subpart C in metric tons to the total CO₂e emissions (excluding biogenic CO₂) aggregated across all direct emitter source categories (subparts C-HH) associated with the facility as follows:
 - Add the value reported under Subpart C for CO₂ (excluding biogenic CO₂).

- Multiply the value reported under Subpart C for CH₄ by the Global Warming Potential for CH₄ (21) and add the result.
 - Multiply the value reported under Subpart C for N₂O by the Global Warming Potential for N₂O (310) and add the result.
- 2) Add the total annual biogenic CO₂ mass emissions reported under Subpart C to the total biogenic CO₂ aggregated across all direct emitter source categories (subparts C-HH) associated with the facility.

Table 33
Facility Level Roll-up Emissions XML Data Elements

Data Element Name	Description
TotalNonBiogenicCO2eFacilitySubpartsCtoJJ	Add the total CO ₂ e value for Subpart C in metric tons to the total CO ₂ e emissions (excluding biogenic CO ₂) aggregated across all direct emitter source categories (subparts C-HH) associated with the facility according to the guidelines above.
TotalNonBiogenicCO2eFacilitySubpartsCtoJJ.massUOM	Metric Tons
TotalBiogenicCO2FacilitySubpartsCtoJJ	Add the total annual biogenic CO ₂ mass emissions reported under Subpart C to the total biogenic CO ₂ aggregated across all direct emitter source categories (subparts C-HH) associated with the facility according to the guideline above.
